This book describes in considerable detail the people, events ships and aircraft that shaped the Air Service from its origins in the late 19th century to its demise in 1945. The formative years began when a British Naval Mission was established in Japan in 1867 to advise on the development of balloons for naval purposes. After the first successful flights of fixed-wing aircraft in the USA and Europe, the Japanese navy sent several officers to train in Europe as pilots and imported a steady stream of new models to evaluate. During World War One Japan became allied with the UK and played a significant part in keeping the German fleets of ships and submarines at bay in the Pacific and Indian Oceans. However, in the international naval treaties that followed they felt betrayed, since the number of capital ships, battleships and cruisers, that they were allowed was below those of the USA and the UK. Aircraft carriers were not included, so a program of carrier building was started and continued until World War Two. At the same time they developed an aircraft industry and at the beginning of war their airplanes were comparable, and in some instances superior, to those of the British and Americans. Much prewar experience was gained during Japans invasion of China, but their continued anger with America festered and resulted in their becoming allied with Germany, Italy and the Vichy France during World War Two. There followed massive successful attacks on Pearl Harbor, the Philippines, the Southern Islands, Port Darwin and New Guinea. The British were decimated and the USA recoiled at the onslaught, taking over a

year to regroup and take the war to the Imperial Japanese forces. Throughout the conflict many sea battles were fought and the name Zero became legendary. When Japan eventually capitulated after the Atomic bombs were dropped the Japanese Imperial Air Service was disbanded. Packed with lively reader feedback, extensive reviews, and personal advice, "Fodors Alaska 2008" has been revamped and revised. A photo-rich interior, a pullout color map, and updated topographical maps of the best parks and preserves are also included. This "outstanding piece of research" on Hungary's secret air force program "fills a critical gap in our understanding" of pre-WWII military advancement (John H. Morrow Jr., author of *The Great War*). In the aftermath of World War I, Hungary was officially banned from maintaining a military air service. Despite this mandate, however, the embattled nation was determined to rearm itself. Drawing upon a wealth of previously untranslated documents, this fascinating history reveals the story of how Hungary secretly built an entire air force during the interwar years. In the early 1920s, Hungarian officials managed to evade and obstruct Allied inspectors at every turn. Unable to pursue domestic manufacturing, the clandestine rearmament program secretly bought planes from Italy and Germany. Great efforts were made to stockpile equipment from the Great War, and the Hungarian government promoted the development of commercial aviation—partly as a front for military flight operations. During the late 1930s, the Hungarian air force went from a secret branch of the army to an independent modernizing force in its own right. But this success came at a heavy cost: increasing German support brought a growing Nazi influence over the country. Hungary entered the Second World War on the side of the Axis in 1941, with its air force soon becoming little more than a Luftwaffe auxiliary force. Besieged by Allied bombings, the Hungarian air force ended the Second World War much as they had the First—salvaging aircraft parts from downed invaders and fighting until they no longer had airfields from which to operate. This is a maintenance and repair manual for the DIY mechanic.
