**Cybercrime** Jun 10 2021 Cybercrime is a growing problem in the modern world. Despite the many advantages of computers, they have spawned a number of crimes, such as hacking and virus writing, and made other crimes more prevalent and easier to commit, including music piracy, identity theft and child sex offences. Understanding the psychology behind these crimes helps to determine what motivates and characterises offenders and how such crimes can be prevented. This textbook on the psychology of the cybercriminal is the first written for undergraduate and postgraduate students of psychology, criminology, law, forensic science and computer science. It requires no specific background knowledge and covers legal issues, offenders, effects on victims, punishment and preventative measures for a wide range of cybercrimes. Introductory chapters on forensic psychology and the legal issues of cybercrime ease

students into the subject, and many pedagogical features in the book and online provide support for the student.

*Professional ASP.NET 3.5 Security, Membership, and Role Management with C# and VB* Dec 17 2021 This book is intended for developers who are already familiar with

and have a solid understanding of ASP.NET 1.1 and ASP.NET 2.0 security concepts, especially in the areas of forms authentication, page security, and website authorization. It assumes that you have a good understanding of the general functionality of Membership and Role Manager. It also assumes that you have some familiarity working with ASP.NET AJAX 3.5. The book aims to “peel back the covers” of various ASP.NET security features so you can gain a deeper understanding of the security options available to you. Explaining the new IIS 7.0 and its Integrated mode of execution is also included in the book. This book was written using the .NET 3.5 Framework along with the .NET Framework SPI on both Windows Server 2008 and Windows Vista. The sample code in the book has been verified to work with .NET 3.5 Framework and .NET 3.5 Framework SPI on Windows Vista. To run all of the samples in the book you will need the following: Windows Server 2008 or Windows Vista Internet Information Services 7.0 (IIS 7.0) Visual Studio 2008 RTM Either SQL Server 2000 or SQL Server 2005 A Windows Server 2008 domain running at Windows Server 2008 functional level This book covers many topics and areas in ASP.NET 2.0 and ASP.NET 3.5. It first introduces Internet Information Services 7.0 (IIS 7.0). It goes on to explain in detail the new IIS 7.0 Integrated mode of execution. Next, detailed coverage of how security is applied when the ASP.NET application starts up and when

a request is processed in the newly introduced integrated request-processing pipeline is discussed. After this, the book branches out and begins to cover security information for features such as trust levels, forms authentication, page security, and session state. This will show you how you can benefit from the IIS 7.0 Integrated mode to make better use of ASP.NET features. You will also gain an understanding of the lesser known security features in ASP.NET 2.0 and ASP.NET 3.5. In chapter 10 the book changes direction and addresses two security services in ASP.NET 2.0 and ASP.NET 3.5: Membership and Role Manager. You will learn about the provider model that underlies each of these features. The internals of the feature are also discussed, as well as the SQL- and Active Directory-based providers included with them. The discussion of ASP.NET features is continued in chapter 17, which is dedicated to the ASP.NET AJAX 3.5 security integration with ASP.NET 3.5; it will also show how to authenticate and authorize users with JavaScript code written from the client-side. The book closes with a chapter about the best practices ASP.Net developers should follow to protect their applications from attack. Chapter 1 starts by refreshing ideas on application pools and worker processes. It later gets into the major components that make up IIS 7.0. Chapter 2 begins by introducing the advantages of the IIS 7.0 and ASP.NET integrated mode. Chapter 3 gives you a walkthrough of the security processing that both IIS 7.0

and ASP.NET perform in the integrated/unified request-processing pipeline. Chapter 4 defines what an ASP.NET trust level is and how ASP.NET trust levels work to provide secure environments for running web applications. Chapter 5 covers the security features in the 2.0 and 3.5 Frameworks' configuration systems. Chapter 6 explains ASP.NET 2.0 and ASP.NET 3.5 features for forms authentication. Chapter 7 demonstrates using IIS 7.0 wildcard mappings and ASP.NET 2.0 and ASP.NET 3.5 support for wildcard mappings to share authentication and authorization information with Classic ASP applications. Chapter 8 covers security features and guidance for session state. Chapter 9 describes some lesser known page security features from ASP.NET 1.1 and describes how ASP.NET 2.0 and ASP.NET 3.5 options for securing viewstate and postback events. Chapter 10 gives you an architectural overview of the provider model in both ASP.NET 2.0 and ASP.NET 3.5. Chapter 11 talks about the Membership feature in ASP.NET 2.0 and ASP.NET 3.5 Chapter 12 delves into both the SqlMembershipProvider as well as general database design assumptions that are included in all of ASP.NET 2.0's and ASP.NET 3.5's SQL-based features. Chapter 13 covers other membership provider that ships in ASP.NET 2.0 and ASP.NET 3.5-ActiveDirectoryMembershipProvider. Chapter 14 describes the Role Manager feature that provides built-in authorization support for ASP.NET 2.0 and ASP.NET 3.5.

Chapter 15 discusses the `SqlRoleProvider` and its underlying SQL schema. Chapter 16 covers the `AuthorizationStoreRoleProvider`, which is a provider that maps Role Manager functionality to the Authorization Manager. Chapter 17 discusses how ASP.NET AJAX 3.5 integrates with ASP.NET 3.5 Membership and Role management features through newly introduced web services. Chapter 18 covers the best practices that can be followed to secure ASP.NET applications. **Facebook Nation** Apr 01 2023 Facebook's psychological experiments and Edward Snowden's NSA leaks epitomize a world of increasing information awareness in the social media ecosystem. With over a billion monthly active users, Facebook as a nation

is overtaking China as the largest country in the world. President Barack Obama, in his 2011 State of the Union Address, called America “the nation of Edison and the Wright brothers” and “of Google and Facebook.” U.S. Chief Information Officer Steven VanRoekel opines that America has become a “Facebook nation” that demands increased transparency and interactivity from the federal government. Ubiquitous social networks such as Facebook, Google+, Twitter, and YouTube are creating the technologies, infrastructures, and big data necessary for Total Information Awareness – a controversial surveillance program proposed by DARPA after the 9/11 attacks. NSA’s secret PRISM program has reinvigorated WikiLeaks founder Julian Assange’s accusation that “Facebook is the most appalling spying machine that has ever been invented.” Facebook CEO Mark Zuckerberg once said, “We exist at the intersection of technology and social issues.” This book offers discourse and practical advice on the privacy issue in the age of big data, business intelligence in social media, e-government and e-activism, as well as personal total information awareness. This expanded edition also includes insights from Wikipedian Emily Temple-Wood and Facebook ROI experts Dennis Yu and Alex Houq.

Natural Language Processing for Social Media May 10 2021 In recent years, online social networking has revolutionized interpersonal communication. The newer research on language analysis in social media has been increasingly focusing on the latter's impact on our daily lives, both on a personal and a professional level. Natural language processing (NLP) is one of the most promising avenues for social media data processing. It is a scientific challenge to develop powerful methods and algorithms which extract relevant information from a large volume of data coming from multiple

sources and languages in various formats or in free form. We discuss the challenges in analyzing social media texts in contrast with traditional documents. Research methods in information extraction, automatic categorization and clustering, automatic summarization and indexing, and statistical machine translation need to be adapted to a new kind of data. This book reviews the current research on Natural Language Processing (NLP) tools and methods for processing the non-traditional information from social media data that is available in large amounts (big data), and shows how innovative NLP approaches can integrate appropriate linguistic information in various fields such as social media monitoring, health care, business intelligence, industry, marketing, and security and defense. We review the existing evaluation metrics for NLP and social media applications, and the new efforts in evaluation campaigns or shared tasks on new datasets collected from social media. Such tasks are organized by the Association for Computational Linguistics (such as SemEval tasks) or by the National Institute of Standards and Technology via the Text REtrieval Conference (TREC) and the Text Analysis Conference (TAC). In the concluding chapter, we discuss the importance of this dynamic discipline and its great potential for NLP in the coming decade, in the context of changes in mobile technology, cloud computing, and social networking.

Managing Negative Word-of-Mouth on Social Media Platforms Dec 29 2022 Ines Nee makes important key contributions to service recovery research by analyzing the effect of management response content towards negative online customer reviews on the observer's purchase intention. This study is the first to provide a conceptual basis of observers' behavioral reactions towards organizational complaint handling in the context of social media and to empirically test the effect of the two most resource-intensive response options of compensation and explanation. With the help of a profound experimental design, the author detects strategies on how hotel companies should respond towards negative online customer reviews in order to increase the observer's purchase intention and the hotel company's return on complaint management.
