This book offers nuanced analyses of the narratives, spaces, and forms of citizenship education prior to and during the aftermath of the January 2011 Egyptian Revolution. To explore the dynamics shaping citizenship education during this significant socio-political transition, this edited volume brings together established and emerging researchers from multiple disciplines, perspectives, and geographic locations. By highlighting the impacts of recent transitions on perceptions of citizenship and citizenship education in Egypt, this volume demonstrates that the critical developments in Egypt's schools, universities, and other non-formal and informal spaces of education, have not been isolated from local, national, and global debates around meanings of citizenship. The framework illustrates these three potentially overlapping roles by mapping the complex educational contexts of conflict-affected societies and considering how textbooks, learning materials, and education systems more broadly may simultaneously operate within these various roles. Country case studies from Asia, Europe, Africa, and the Middle East are used to analyze primary and secondary school textbook development, content, and application from a variety of approaches that articulate conflict as protracted and/or socio-political violence. The breadth of case studies shows how conflict discourse circulates in educational systems and materials in a wide range of contexts, indicating that the complexity of the relationship between textbooks and conflict is not unique to one culture, geographic region, or type of conflict. The latest volume in the World Yearbook of Education Series explores the relationship between education and the globally prevalent principle of nationalism. This book identifies the diverse ways in which educational policies, discourses, curricula and pedagogy embed and promote the concept of "the nation" both historically and in the age of globalization. By challenging accounts owed to the discourse of "globalization" which conceal the presence of national epistemologies and interests in education, this book offers important insights into the role of education in making nationalism one of the most enduring and yet easily obscured forces of our time. Organized into four sections, this book looks at the following main issues: Historical (re)production of the nation considers how countries consider and reproduce their national identity and how this is built on their history. Hegemonic aspirations and interventions examines how instruction technologies developed during the Cold War have been propagated and disseminated around the world, how the development of educational policy based on the human capital theory emerged, and analyzes the extent to which tech companies are intent on establishing an imperial order of learning. Imperial policies and resurgences of nationalisms explores how global or imperial policies have been indulged in different parts of the world and how new forms of nationalism have been emerging. Paradoxes, inconsistencies, and a self-reflection focuses on nations acting imperially as sites of domestic injustices, addresses unresolved paradoxes between the global and the national and includes a historically informed critical review of the World Yearbooks of Education. Bringing together the voices of researchers from around the globe, The World Yearbook of Education 2022 is ideal reading for anyone interested in learning how nationalism has affected the expansion of education systems and how its imperial aspirations are currently affecting education policy and practice. It offers in-depth descriptions of the way in which students, teachers, and managers interact and communicate with one another in a variety of school activities. Through the communication process, cultural experiences and understandings are negotiated constantly among school participants. The ethnographic study also has a critical intention. Going beyond description, the author discusses the extent to which networks of social relationships in the case are imbued by asymmetries in power, and how this leads to people's inability, unwillingness, and unawareness to interact with those from different cultural backgrounds. As research findings reveal, where the construction of meaning is less equally available to each participant, prejudice and exclusiveness are more likely to be assumed, impeding individuals' intercultural learning. The key is to empower those less privileged, giving them legitimacy to come to voice in an institutional context on the one hand, and protecting their reflections on hegemonic discourse meticulously on the other hand. Since the research explores the complexities and subtleties of the communication process that are bound to particular contexts, like most ethnographic studies, it aims at adding a

body of experience and humanistic understanding of cultures, rather than testing theories. Although the IB Program being studied can hardly be representative of the overall development of international education in China, the detailed description of contextual issues of the case and the research procedures could facilitate the readers to vicariously experience these events, thus they can make their own decisions about the transferability of the research to their own unique situations.
