The Historians of Ancient Rome is the most comprehensive collection of ancient sources for Roman history available in a single English volume. After a general introduction on Roman historical writing, extensive passages from more than a dozen Greek and Roman historians and biographers trace the history of Rome over more than a thousand years: from the city's foundation by Romulus in 753 B.C.E. (Livy) to Constantine's edict of toleration for Christianity (313 C.E.) Selections include many of the high points of Rome's climb to world domination: the defeat of Hannibal; the conquest of Greece and the eastern Mediterranean; the defeat of the Catilinarian conspirators; Caesar's conquest of Gaul; Antony and Cleopatra; the establishment of the Empire by Caesar Augustus; and the "Roman Peace" under Hadrian and long excerpts from Tacitus record the horrors of the reigns of Tiberius and Nero. The book is intended both for undergraduate courses in Roman history and for the general reader interested in approaching the Romans through the original historical sources. Hence, excerpts of Polybius, Livy, and Tacitus are extensive enough to be read with pleasure as an exciting narrative. Now in its third edition,

changes to this thoroughly revised volume include a new timeline, translations of several key inscriptions such as the Twelve Tables, and additional readings. This is a book which no student of Roman history should be without. Late Antiquity (ca. 250-650) witnessed the transition from Classical Antiquity to the Middle Ages in the Mediterranean and Near Eastern worlds. Christianity displaced polytheism over a wide area, offering new definitions of identity and community. The Roman Empire collapsed in Western Europe to be replaced by new "Germanic" kingdoms. In the East, Byzantium emerged, while the Persian Empire reached its apogee and collapsed. Arab armies carrying the banner of Islam reshaped the political map and brought the late antique era to a close. This sourcebook illustrates the dramatic political, social and religious transformations of Late Antiquity through the words of the men and women who experienced them. Drawing from Greek, Latin, Syriac, Hebrew, Coptic, Persian, Arabic and Armenian sources, the carefully chosen passages illuminate the lives of emperors, abbesses, aristocrats, slaves, children, barbarian chieftains, and saints. The Roman Empire is kept at the centre of the discussion, with chapters devoted to its government, cities, army, law, medicine, domestic life, philosophy, Christianity, polytheism, and Jews. Further chapters deal with the peoples who surrounded the Roman state: Persians, Huns, northern "Germanic" barbarians, and the followers of Islam. This revised and updated second edition provides an expanded view of Late Antiquity with a new chapter on domestic life, as well extra material throughout, including passages that appear for the first time in English translation. Readings in Late Antiquity is the only sourcebook that covers such a wide range of topics over the full breadth of the late antique period. The original edition of Pompeii: A Sourcebook was a crucial resource for students of the site. Now updated to include material from Herculaneum, the neighbouring town also buried in the eruption of Vesuvius, Pompeii and Herculaneum: A Sourcebook allows readers to form a richer and more diverse picture of urban life on the Bay of Naples. Focusing upon inscriptions and ancient texts, it translates and sets into context a representative sample of the huge range of source material uncovered in these towns. From the labels on wine jars to scribbled insults, and from advertisements for gladiatorial contests to love poetry, the individual chapters explore the early history of Pompeii and Herculaneum, their destruction, leisure pursuits, politics, commerce, religion, the family and society. Information about Pompeii and Herculaneum from authors based in Rome is included, but the great majority of sources come from the cities themselves, written by their ordinary inhabitants – men and women, citizens and slaves. Incorporating the latest research and finds from the two cities and enhanced with more photographs, maps, and plans, Pompeii and Herculaneum: A Sourcebook offers an invaluable resource for anyone studying or visiting the sites. Publisher Description This much-needed reference equips electrical engineers, designers, and researchers in the microwave industry with comprehensive, up-to-date information on the theoretical principles and practical applications of dielectric integrated guides and circuits. Pocket size and easy to carry, "MustSees Paris" conducts visitors to such iconic sights as the Eiffel Tower, Sacre Coeur, the Louvre, and Notre Dame. Maps and recommendations help one make the most out of any trip to the City of Light. Women in the Ancient Near East provides a collection of primary sources that further our understanding of women from Mesopotamian and Near Eastern civilizations, from the earliest historical and literary texts in the third millennium BC to the end of Mesopotamian political autonomy in the sixth century BC. This book is a valuable resource for historians of the Near East and for those studying women in the ancient world. It moves beyond simply identifying women in the Near East to attempting to place them in historical and literary context, following the latest research. A number of literary genres are represented, including myths and epics, proverbs, medical texts, law collections, letters, treaties, as well as building, dedicatory, and funerary inscriptions. The volume contains 450 pages of less easily available sources on this frequently studied period of Roman history, concentrating on a greater range of material more contemporary than Tacitus, Suetonius and Dio. It will be of use to students and teachers, studying Roman history in the UK and at English speaking universities. Part one long texts, and part two is arranged by themes focused on political history and the emperors. The documents include inscriptions, 55 coins and 8 other illustrations; there are 7 family trees, 2 maps of the period and explanatory notes by leading academics. This textbook is targeted to undergraduate students in chemical engineering, chemical technology, and biochemical engineering for courses in mass transfer, separation processes, transport processes, and unit operations. The principles of mass transfer, both diffusional and convective have been comprehensively discussed. The application of these principles to separation processes is explained. The more common separation processes used in the chemical industries are individually described in separate chapters. The book also provides a good understanding of the construction, the operating principles, and the selection criteria of separation equipment. Recent developments in equipment have been included as far as possible. The procedure of equipment design and sizing has been illustrated by simple examples. An overview of different applications and aspects of membrane separation has also been provided. 'Humidification and water cooling', necessary in every process industry, is also described. Finally, elementary principles of 'unsteady state diffusion' and mass transfer accompanied by a chemical reaction are covered. SALIENT FEATURES : • A balanced coverage of theoretical principles and applications. • Important recent developments in mass transfer equipment and practice are included. • A large number of solved problems of varying levels of complexities showing the applications of the theory are included. • Many end-chapter exercises. • Chapter-wise multiple choice questions. • An Instructors manual for the teachers. Annotation This book fulfills the lack of a modern analysis of the history of igneous petrology and will be a significant contribution. The author is a well-known igneous petrologist who appreciates the extent to which many geological questions are still awaiting definitive answers. With the help of a wide variety of source material, particularly legal documents and inscriptions, some of it made available for the first time in English, this book illustrates the activities associated with the household, demonstrating the different and frequently conflicting roles and moral values expected from its various members: male and female, old and young, freedman and slave. Learn how to deal with the peculiar problems of traditional bargaining through proven models and techniques that will help you to: Gain a better understanding of the dynamics of money negotiations, Identify the recurring problems presented in the negotiation of insured claims, Arm yourself with new tools to move beyond impasse, Build a model of the mediation process that assists when traditional bargaining is unavoidable, Help the parties in traditional bargaining in a facilitative, rather than a directive way. Book jacket. This comprehensive book will be a fundamental resource for students of Ancient Greek history and anyone interested in the law, social history and oratory of the Ancient Greek world. In 2014 a massive terrorist attack in London kills 80,000. Ten years later we join T14, the money no object, red tape defying counter terrorist organisation tasked with ensuring that this never happens again. Recruiting from the police, SAS and other agencies, T14 uses the latest technology and a no nonsense approach to fighting terrorism and related crime. One of their agents is pulled from an undercover

operation when Agent 4 goes missing. Agent 4 is a man with a computer implant in his brain which allows him to access digital information. Somebody has interfered with his implant and his memory and he ends up in America with no idea what he's been doing or how he got there. Could it be one of his own colleagues who did this to him? Either way, Arthur swears to kill whoever sabotaged his mind. Meanwhile, T14 have to cope with internal espionage, assassinations and an ever worsening political crisis. Warfare in Ancient Greece assembles a wide range of source material and introduces the latest scholarship on the Greek experience of war. The author has carefully selected key texts, many of them not previously available in English, and provided them with comprehensive commentaries. For the Greek polis, warfare was a more usual state of affairs than peace. The documents assembled here recreate the social and historical framework in which ancient Greek warfare took place - over a period of more than a thousand years from the Homeric Age to Alexander the Great. Special attention is paid to the attitudes and feelings of the Greeks towards defeated people and captured cities. Complete with notes, index and bibliography, Warfare in Ancient Greece will provide students of Ancient and Military History with an unprecedented survey of relevant materials. This middle grades geography and cultures program puts the world at your fingertips in a single convenient text - ideal for curriculum that covers the whole world in one school year. A grade-appropriate narrative combines with stunning visuals and an accessible layout to motivate all students to read. The program's innovative approach sparks interest and helps middle grades students make interdisciplinary connections. This sourcebook uniquely gathers a wide range of texts that illustrate the physical structures of the city, the rhythms of its daily life and the interaction between topography, monuments and the people from Rome's earliest days, through its imperial heyday until its transformation into the Western Christian capital. The chapters examined within this comprehensive introduction include: the early and republican city the emperor art and architecture leisure, life and death religion and late antiquity. Ancient City of Rome is designed to be directly relevant to those studying Roman civilization, or the city of Rome, at school or university level. Greek and Roman Slavery brings together fresh English translations of 243 texts and inscriptions on slavery from fifth and fourth century Greece and Rome. The material is arranged thematically, offering the reader a comprehensive review of the idea and practice of slavery in ancient civilization. In addition, a thorough bibliography for each chapter, as well as an extensive index, make this a valuable source for scholars and students. Discusses common anxieties and outlines several tools and techniques for dealing with phobias, anxieties, and panic attacks. Presents new ways of thinking about parental involvement in the teaching of reading and writing aimed at both researchers and practitioners. It relates the recent growth of involvement to broader considerations of the nature of literacy and historical exclusion of parents from the curriculum. This book advances our understanding of the place of Latin inscriptions in the Roman world. It enables readers, especially those new to the subject, to appreciate both the potential and the limitations of inscriptions as historical source material, by considering the diversity of epigraphic culture in the Roman world and how it has been transmitted to the twenty-first century. The first chapter offers an epigraphic sample drawn from the Bay of Naples, illustrating the dynamic epigraphic culture of that region. The second explores in detail the nature of epigraphic culture in the Roman world, probing the limitations of traditional ways of dividing up inscriptions into different categories, and offering examples of how epigraphic culture developed in different geographical, social and religious contexts. It examines the 'life-cycle' of inscriptions - how they were produced, viewed, reused and destroyed. Finally, the third provides guidance on deciphering inscriptions face-to-face and handling specialist epigraphic publications. Emphasizes the design, control and functioning of various unit operations - offering shortcut methods of calculation along with computer and nomographic solution techniques. Provides practical sections on conversion to and from SI units and cost indexes for quick updating of all cost information.; This book is designed for mechanical, chemical, process design, project, and materials engineers and continuing-education courses in these disciplines. Emphasizes the design, control, and functioning of various unit operations - offering shortcut methods of calculation along with computer and nomographic solution techniques.
