Energy from solar radiation, fixated by self-assembling plant structures, creates biomass that is converted to energy carriers fit for application in today's and tomorrow's energy-generating equipment. The central theme of this book is the development of the current

largest renewable energy source for efficient applications in modern and developing society—biomass. The book is presented in an easy-to-understand manner for non-experts, nevertheless revealing the true challenges of this extremely broad area. Through this book, passionate pioneers and (ex-)EU officials tell the interesting history of the use of biomass by mankind in general and how the future of its modern use was shaped by active support of the European Union. The book mainly emphasizes specific technologies, both biological and thermo-chemical, from simple to extremely complex. Recognized experts explain

these technologies in a clear way along with their future prospects. Climb on the shoulders of all 35 authors of the book and look into the close and distant future where interaction with other renewable sources will occur, and discover a renewable energy future in which an important role will be played by the oldest one—bioenergy. SURPLUS RECORD, is the leading independent business directory of new and used capital equipment, machine tools, machinery, and industrial equipment, listing over 95,000 industrial assets; including metalworking and fabricating machine tools, chemical and process equipment, cranes, air

compressors, pumps, motors, circuit breakers, generators, transformers, turbines, and more. Over 1,100 businesses list with the SURPLUS RECORD. March 2022 issue. Vol. 99, No. 3 Across the world each year events of every shape and size are held: from community events, school fairs and local business functions through to the world's largest festivals, music events, conferences and sporting events. As well as causing celebration and giving voice to issues, these public parties use up resources, send out emissions and generate mountains of waste. Events also have the power to show sustainability in action and

every sustainably produced event can inspire and motivate others to action. Written by a leader in event sustainability management, this book is a practical, step-by-step guide taking readers through the key aspects of how to identify, evaluate and manage event sustainability issues and impacts and to use the event for good - it's for events of any style and scale, anywhere in the world. Now in its third edition, this is the indispensable one-stop guide for event professionals and event management students who want to adjust their thinking and planning decisions towards sustainability, and who need a powerful, easy-to-use

collection of tools to deliver events sustainably. Derived from the renowned multi-volume International Encyclopaedia of Laws, this book provides ready access to legislation and practice concerning the environment in India. A general introduction covers geographic considerations, political, social and cultural aspects of environmental study, the sources and principles of environmental law, environmental legislation, and the role of public authorities. The main body of the book deals first with laws aimed directly at protecting the environment from pollution in specific areas such as air,

water, waste, soil, noise, and radiation. Then, a section on nature and conservation management covers protection of natural and cultural resources such as monuments, landscapes, parks and reserves, wildlife, agriculture, forests, fish, subsoil, and minerals. Further treatment includes the application of zoning and land-use planning, rules on liability, and administrative and judicial remedies to environmental issues. There is also an analysis of the impact of international and regional legislation and treaties on environmental regulation. Its succinct yet scholarly nature, as well as the practical quality of the

information it provides, make this book a valuable resource for environmental lawyers handling cases affecting India. Academics and researchers, as well as business investors and the various international organizations in the field, will welcome this very useful guide, and will appreciate its value in the study of comparative environmental law and policy. It is the largest theft in American history. It is the largest cover-up in American history. It is the biggest scandal and cover-up in U.S. Marine Corps history, the assassination of a stalwart Colonel who investigated the titanic thievery. It is the largest group of Americans to

simultaneously betray their country since at least the U.S. Civil War. It is also the biggest unsolved mystery in U.S. history: Why did the U.S. invade Iraq during Gulf War II? It is the greatest example of a perfect U.S. "Deep State" operation that is still on-going. SURPLUS RECORD, is the leading independent business directory of new and used capital equipment, machine tools, machinery, and industrial equipment, listing over 110,000 industrial assets since 1924; including metalworking and fabricating machine tools, lathes, cnc equipment, machine centers, woodworking equipment, food equipment, chemical and process

equipment, cranes, air compressors, pumps, motors, circuit breakers, generators, transformers, turbines, and more. Over 1,100 businesses list with the SURPLUS RECORD. May 2023 issue. Vol. 100, No. 5 This book analyses the contribution of the IMO International Convention for the Safe and Environmentally Sound Recycling of Ships to sustainable ship recycling against the backdrop of present practices and third world approaches to sustainable development. This book comprises select peer-reviewed proceedings of the 26th National Conference on IC Engines and Combustion (NCICEC) 2019 which was

organised by the Department of Mechanical Engineering, National Institute of Technology Kurukshetra under the aegis of The Combustion Institute-Indian Section (CIIS). The book covers latest research and developments in the areas of combustion and propulsion, exhaust emissions, gas turbines, hybrid vehicles, IC engines, and alternative fuels. The contents include theoretical and numerical tools applied to a wide range of combustion problems, and also discusses their applications. This book can be a good reference for engineers, educators and researchers working in the area of IC engines and combustion.

Includes list of members, 1882-1902 and proceedings of the annual meetings and various supplements. This book deals with modern Computer-Aided Design (CAD) software tools and platforms implemented in ship design, the integration of techno-economic databases, the use of optimisation and simulation software tools, which are integrated in these platforms, and the virtual modelling of ships and their operation by using a Virtual Vessel Framework (VVF). It contains a series of application case studies related to the developed holistic approach to ship design and operation. Nine case studies are

described, referring to the design and operation of various ship types, namely RoPax, cruise ship, double-ended ferry, bulk carrier, containership, offshore support vessel, ocean surveillance ship and research vessel and one offshore structure. All case studies are driven by leading representatives of the European Maritime Industry. This book complements A Holistic Approach to Ship Design, volume 1, which covers methods and tools for the life cycle optimisation and assessment of ship design and operation. Solar energy is an abundant resource. Once a curiosity, solar electric systems are becoming commonplace. As

we transition away from finite and polluting fossil fuels, clean, reliable, and affordable renewable technologies such as solar electricity will become the mainstay of our energy supply. Solar Electricity Basics provides a clear understanding of the sun, solar energy, and solar electric systems. It discusses the theoretical, practical and economic aspects of residential solar installations including: Inverters Batteries and controllers Costs of solar electric systems Financial incentives System installation and maintenance Permits, covenants, utility interconnection and buying a system. Whether your goal is to lower your energy bill through

a grid-connected system or to achieve complete energy independence, Solar Electricity Basics is the introduction you need-no PhD required! Over 1,100 businesses list with the SURPLUS RECORD. March 2022 issue. Vol. 100, No. 2 Asphaltenes have traditionally been viewed as being extremely complex, thus very hard to characterize. In addition, certain fundamental properties of

asphaltenes have previously been inaccessible to study by traditional macroscopic methods, further limiting understanding of asphaltenes. These limitations inhibited development of descriptions regarding the microscopic structure and solution dynamics of asphaltenes. However, a variety of more recent studies have implied that asphaltenes share many chemical properties with the smaller, more tractable components of crude oils. Recent measurements have indicated that asphaltene molecular weights are not as large as previously thought, perhaps in the range of 600 to 1000 amu. In addition, new

experimental methods applied to asphaltene chemical structures have been quite revealing, yielding a broad understanding. Consequently, the ability to relate chemical structure with physical and chemical properties can be developed and extended to the understanding of important commercial properties of asphaltenes. This book treats significant new developments in the fundamentals and applications of asphaltenes. In the first section of the book, new experimental methods are described that characterize asphaltene structures from the molecular to colloidal length scale. The colloidal properties are understandable in terms of

asphaltene chemical structures, especially with regard to the heteroatom impact on bonding. However, quantitative measurements of the of asphaltene self-association still need to be determined. In the second section of enthalpy this book, the fundamental understanding of asphaltenes is related riirectly to asphaltene utilization. The report of the National Coal Policy Project is entitled Where We Agree to focus attention on the broad areas of agreement reached by the project participants. This one-year project brought together leading individuals from environmental and industry groups to seek

consensus on important national policy issues related to the use of coal in SURPLUS RECORD, is the leading independent business directory of new and used capital equipment, machine tools, machinery, and industrial equipment, listing over 95,000 industrial assets; including metalworking and fabricating machine tools, chemical and process equipment, cranes, air compressors, pumps, motors, circuit breakers, generators, transformers, turbines, and more.
