Krupp Dec 04 2020 "Tells the story of the Krupp family and its industrial empire between the early nineteenth century and the present, and analyzes its transition from a family business to one owned by a non-profit foundation. Krupp founded a small steel mill in 1811, which established the basis for one of the largest and most important companies in the world by the end of the century. Famously loyal to its highly paid workers, it rejected an exclusive focus on profit, but the company also played a central role in the armament of Nazi Germany and the firm's head was convicted as a war criminal at Nuremberg. Yet after the war Krupp managed to rebuild itself and become a symbol of Germany once again -- this time open, economically successful, and socially responsible" -- Publisher's description.

Precious Metal Nov 26 2022 With its incorporation into architecture on a grand scale during the long nineteenth century, steel forever changed the way we perceive and inhabit buildings. In this book, Peter H. Christensen shows that even as architects and engineers were harnessing steel's incredible properties, steel itself was busy transforming the natural world. Precious Metal explores this quintessentially modernist material—not for the heroic structural innovations it facilitated but for a deeper understanding of the role it played in the steady change of the earth. Focusing on the formative years of the architectural steel economy and on the corporate history of German steel titans Krupp and Thyssen, Christensen investigates the ecological interrelationship of artificial and natural habitats, mediated by steel. He traces steel through six distinct phases: birth, formation, display, dispersal, construction, and return. By following the life of steel from the collection of raw minerals to the distribution and disposal of finished products, Christensen challenges the traditional narrative that steel was simply

the primary material responsible for architectural modernism. Based on the premise that building materials are as much a part of the natural world as they are of a building, this groundbreaking book rewrites an important chapter of architectural history. It will be welcomed by specialists in architectural history, nineteenth-century studies, environmental history, German studies, modernist studies, and the Anthropocene.

trapped in the Allies' ever-tightening Ring of Steel. In this compelling history, Alexander Watson retells the war from the perspective of its losers: not just the leaders in Berlin and Vienna, but the people of Central Europe. The war shattered their societies, destroyed their states, and imparted a poisonous legacy of bitterness and violence. A major reevaluation of the First World War, Ring of Steel is essential for anyone seeking to understand the last century of European history.

***The Emergence of the Common European Competition Policy. Competition Policy in Germany, the European Coal and Steel Community and the European Economic Community* Jul 11 2021 Seminar paper from the year 2015 in the subject Politics - International Politics - Topic: European Union, grade: 2,0, University of Mannheim, language: English, abstract: In this paper I will address the emergence of the European competition law in the 1950s and early 1960s and draw a special focus on how Germany and its national competition policy influenced the European course. The main part of this paper is subdivided into three**

parts, the Competition Policy in Germany, the European Coal and Steel Community and the European Economic Community. Therefore I will first discuss the development of German competition policy. In particular, I will explain the deconcentration and decartelisation of the German coal and steel industry. Thereafter I will give a short introduction into ordoliberalism as it influenced the German idea of competition policy and lastly give a summary of the history of the German competition law's beginnings. Afterwards I will deal with the foundation of European Coal and Steel Community and analyse the Treaty of Paris, the treaty which established the ECSC. Finally I will draw attention on how the Treaty of Paris was implemented and shortly comment on the reconcentration of the German steel industry. In the last part I will discuss the emergence of the European Economic Community. I will give an overview of the drafting of the Spaak Report and thereafter discuss the Treaty of Rome and the competition policy provisions it contains. That leads me to Regulation 17/62 which

implements the Treaty of Rome to finally conclude with the German influence on the Treaty of Rome and Regulation 17.

Legacies in Steel Apr 07 2021 Nearly 100 German military edged weapons are presented in this sumptuously photographed volume featuring information about their owners. Spanning nearly two hundred years, Legacies in Steel is an in-depth photographic study of historical edged weapons from the German military. The elegant details of each selection are displayed in close-up detail. Many of these weapons belonged to nobility, aristocrats, high-ranking military personnel as well as soldiers and seamen. Where possible, the careers and exploits of these former owners are highlighted, bringing both personal and historical context to these beautifully crafted artifacts. By the 19th century, swords and daggers were no longer effective fighting weapons, but they maintained their popularity in Western

Europe as uniform regalia. They were carried as a symbol of authority, achievement, and most importantly, honor. These weapons were produced with great skill and at high cost, requiring the skill of specialized artisans, often using precious metals and ivory, elaborate hand engraving and chiseling. Blades were fabricated of the highest quality Solingen steel. Folded steel Damascus blades were also painstakingly produced. Many examples are unique and border on singular works of art.

Blood and Iron Jun 29 2020 In this vivid fifty-year history of Germany from 1871-1918—which inspired events that forever changed the European continent—here is the story of the Second Reich from its violent beginnings and rise to power to its calamitous defeat in the First World War. Before 1871, Germany was not yet nation but simply an idea. Its founder, Otto von Bismarck, had a formidable task at hand. How would he bring thirty-nine individual states under the yoke of a single Kaiser? How would he convince proud Prussians, Bavarians, and Rhinelanders to become Germans? Once united, could the

young European nation wield enough power to rival the empires of Britain and France—all without destroying itself in the process? In this unique study of five decades that changed the course of modern history, Katja Hoyer tells the story of the German Empire from its violent beginnings to its calamitous defeat in the First World War. This often startling narrative is a dramatic tale of national self-discovery, social upheaval, and realpolitik that ended, as it started, in blood and iron.

German Steel at the Crossroads Oct 14 2021

***Storm of Steel* Jan 29 2023** In this fascinating account of the battle tanks that saw combat in the European Theater of World War II, Mary R. Habeck traces the strategies developed between the wars for the use of armored vehicles in battle. Only in Germany and the Soviet Union were truly original armor doctrines (generally known as "blitzkrieg" and "deep battle") fully implemented. *Storm of Steel* relates how the German and Soviet armies formulated and chose to put into practice doctrines that were innovative for the time, yet in many respects identical to one another. As part of her extensive archival research in Russia, Germany, and Britain, Habeck had access to a large number of formerly secret and top-secret documents from several post-Soviet archives. This research informs her comparative approach as she looks at the roles of technology, shared influences, and assumptions about war in the formation of doctrine. She also explores relations between the Germans and the Soviets to

determine whether collaboration influenced the convergence of their armor doctrines.

***Nazi Steel* Jun 21 2022** This study explores an exemplary instance of the close interaction between private and official interests in planning and executing the programs of the Nazi government, namely the acquisition in 1941 of the Rombach steel works by the German industrialist Friedrich Flick. The industrial concern headed by Flick was among the largest and most influential steel producers and manufacturers of war material in the German economy during World War II. Its activities in the occupied territories of western Europe centered on control of the Rombach works, a large operation established in Lorraine in the late nineteenth-century by German industrialists and expropriated by France, along with the entire region, in the aftermath of the First World War. After successful military operations against France in 1940, the Nazi regime actively sought the collusion of the German industrial community in mobilizing the productive capacity of occupied territories for the war effort, and numerous

private German businessmen advanced claims on the lucrative assets in Lorraine and adjacent regions. In his bid to gain control of the Rombach works, Flick was successful for reasons specific to his position within the Nazi German economic system and the character of his interests. This account of his activities, then, serves as a fine example of Nazi economic and occupation policy and its response to party, business, and bureaucratic influences.

Ring of Steel Dec 28 2022 Sunday Times History Book of the Year 2014 For the empires of Germany and Austria-Hungary the Great War - which had begun with such high hopes for a fast, dramatic outcome - rapidly degenerated as invasions of both France and Serbia ended in catastrophe. For four years the fighting now turned into a siege on a quite monstrous scale. Europe became the focus of fighting of a kind previously unimagined. Despite local successes - and an apparent triumph in

Russia - Germany and Austria-Hungary were never able to break out of the the Allies' ring of steel. In Alexander Watson's compelling new history of the Great War, all the major events of the war are seen from the perspective of Berlin and Vienna. It is fundamentally a history of ordinary people. In 1914 both empires were flooded by genuine mass enthusiasm and their troubled elites were at one with most of the population. But the course of the war put this under impossible strain, with a fatal rupture between an ever more extreme and unrealistic leadership and an exhausted and embittered people. In the end they failed and were overwhelmed by defeat and revolution.

Iron and Steel in the German Inflation, 1916-1923 Aug 24 2022 This study explains how businessmen in the German iron and steel industry managed their enterprises, dealt with their customers, and acted in their relations with state and society during a period of war, revolution, and economic crisis. Because this industry occupied a central position in Germany during the inflation, the author's investigation

illuminates certain crucial aspects of the Weimar Republic that have hitherto been relatively unexplored. The author explains how heavy industry—and particularly the iron and steel industry—successfully took advantage of shortages of raw materials and of inflation to gain the upper hand over customers in the manufacturing industries. He notes that it proved able to resist government and consumer efforts to change and control policies affecting heavy industry and, finally, to lead the counterattack against labor's greatest gain in the Revolution of 1918, the eight-hour day. Although the importance of iron and steel to the German economy declined in relation to that of more advanced sectors of the economy, its highly concentrated character, able leadership, and importance to the war and reconstruction efforts gave it advantages in reconstituting its power within the business community and the Weimar state. Storm of Steel Dec 16 2021 The memoir widely viewed as the best account ever written of fighting in WW1 A memoir of astonishing power, savagery, and ashen lyricism, Storm of Steel illuminates not only the horrors but also the fascination of total war, seen through the eyes of an ordinary German soldier. Young, tough, patriotic, but also disturbingly self-aware, Jünger exulted in the Great War, which he saw not just as a great national conflict but—more importantly—as a unique personal struggle. Leading raiding parties, defending trenches against murderous British incursions, simply enduring as shells tore his comrades apart, Jünger kept testing himself, braced for the death that will mark his failure. Published shortly after the war's end, Storm of Steel was a worldwide bestseller and can now be rediscovered through Michael

Hofmann's brilliant new translation. For more than sixty-five years, Penguin has been the leading publisher of classic literature in the English-speaking world. With more than 1,500 titles, Penguin Classics represents a global bookshelf of the best works throughout history and across genres and disciplines. Readers trust the series to provide authoritative texts enhanced by introductions and notes by distinguished scholars and contemporary authors, as well as up-to-date translations by award-winning translators.
