DNA replication in eukaryotes is an important field, particularly because of its direct impact on the study of cancer. The understanding of molecular mechanisms of replication and their regulation should allow a better comprehension of the alterations that lead to the proliferation of tumor cells and to error-prone repair in cells exposed to radiation or chemical carcinogens. During the last several years, many enzymes and proteins which participate in replication of DNA in eukaryotic cells have been identified, isolated and characterized. New concepts in chromatin structure have refocused attention on the study of replication of DNA complexed with histones and non-histone chromosomal proteins. However, progress has been noticeably slower than for prokaryotes, essentially because of the difficulty in genetic analysis of eukaryotic DNA replication. In June 1980, a workshop was organized in Cargèse, Corsica (France) to facilitate exchanges of information between workers specializing in prokaryotes and those specializing in eukaryotes, and to allow discussion of new experimental approaches. With this in mind, special interest has been taken in the origin and termination of chromosome cycles and how they are controlled.

Digital fundus images can effectively diagnose glaucoma and diabetes retinopathy, while infrared imaging can show changes in the vascular tissues. Likening the eye to the conventional camera, Image Analysis and Modeling in Ophthalmology explores the application of advanced image processing in ocular imaging. This book considers how images can be used to effectively diagnose ophthalmologic problems. It introduces multi-modality image processing algorithms as a means for analyzing subtle changes in the eye. It details eye imaging, textural imaging, and modeling, and highlights specific imaging and modeling techniques. The book covers the detection of diabetes retinopathy, glaucoma, anterior segment eye abnormalities, instruments on detection of glaucoma, and development of human eye models using computational fluid dynamics and heat transfer principles to predict inner temperatures of the eye from its surface temperature. It presents an ultrasound biomicroscopy (UBM) system for anterior chamber angle imaging and proposes an automated anterior segment eye disease classification system that can be used for early disease diagnosis and treatment management. It focuses on the segmentation of the blood vessels in high-resolution retinal images and describes the integration of the image processing methodologies in a web-based framework

aimed at retinal analysis. The authors introduce the A-Levelset algorithm, explore the ARGALI system to calculate the cup-to-disc ratio (CDR), and describe the Singapore Eye Vessel Assessment (SIVA) system, a holistic tool which brings together various technologies from image processing and artificial intelligence to construct vascular models from retinal images. The text furnishes the working principles of mechanical and optical instruments for the diagnosis and healthcare administration of glaucoma, reviews state-of-the-art CDR calculation detail, and discusses the existing methods and databases. Image Analysis and Modeling in Ophthalmology includes the latest research development in the field of eye modeling and the multi-modality image processing techniques in ocular imaging. COMMENTS FROM OTHER CUSTOMERS Average Customer Rating: (4 of 5 based on 1 review) "This book is a good intro to Root Cause Analysis tools. It is easy to read and laid out in a good format, with a picture and/or sample provided for every tool discussed, along with a checklist for its usage. There is the occasional spot of confusing information, and some of the explanations seem over-simplified or under-explained. But this is not highly prevalent, and the book does accomplish giving the reader a great introduction to these tools and techniques. It may be insufficient for those who are looking for more advanced or in-depth information on any of the tools and techniques. Beginners should find this a very helpful book and one that will be referenced often as they start

The Fourth Course of the International School of Pure and Applied Biostructure, a NATO Advanced Study Institute, was held September 18-31, 1983 at the Ettore Majorana Center for Scientific Culture in Erice, Sicily. The subject of the Fourth Course, which was co-sponsored by national and international agencies, was "Structure and Function of the Genetic "Apparatus." Participants from 15 countries around the world attended the course.

The study of the genetic apparatus is one of humanity's most challenging problems, and it has been approached in the tradition of the School from many different points of view, among them biochemistry, genetic engineering, cell biology, oncology, biophysics and other fields. It has been most difficult to confine such diverse points of view, as well as their proponents, within the four walls of one room, in front of one audience - especially since the heterogeneity of background and the inherent difficulties encountered in communication could overshadow the true spirit of scientific exchange. We are once again pleased to say the outcome of the 1983 Course has matched the success of the previous course held in Erice on the same subject five years ago. This book is the result of the 1983 Advanced Study Institute, and aims to present a cohesive, interdisciplinary view of the current knowledge on the structure and function of the genetic apparatus.

business questions, illustrating them with data and SAS code. The case studies range from a variety of fields, including performing headcount survival analysis for employee retention, forecasting the demand for new projects, using Monte Carlo simulation to understand outcome distribution, among other topics. The data science methods covered include Kaplan-Meier estimates, Cox Proportional Hazard Regression, ARIMA models, Poisson regression, imputation of missing values, variable clustering, and much more! Written for business analysts, statisticians, data miners, data scientists, and SAS programmers, *Applying Data Science* bridges the gap between high-level, business-focused books that skim on the details and technical books that only show SAS code with no business context. A guide for charities and private sector organisations in health and social care on how to become a person-centred organisation, which provides strategies and tools rooted in experience. The sixth edition of *Financial Management* provides students with an overview of financial management suited to the first course in finance. The focus of the text is on the big picture, providing an introduction to financial decision making grounded in current financial theory and the current state of world economic conditions. Attention is paid to both valuation and capital markets, as well as their influence on corporate financial decisions. The 10 basic principles of finance are introduced in the first chapter and woven throughout the text, to give students a solid foundation from which to build their knowledge of finance. The goal of this text is to go beyond teaching the tools of a discipline or a trade and help students gain a complete understanding of the subject. This will give them the ability to apply what they have learnt to new and as yet unforeseen problems—in short, to educate students in finance. This volume of *Current Topics in Membranes* focuses on Membrane Fusion, beginning with fusion and fission of lipid bilayers, with reviews focused on hemifusion and dynamic remodeling of membranes catalyzed by dynamin. Other topics discussed include viral fusion, intracellular fusion, developmental cell fusion, and theoretical modeling. This revised and updated edition focuses on constrained ordination (RDA, CCA), variation partitioning and the use of permutation tests of statistical hypotheses about multivariate data. Both classification and modern regression methods (GLM, GAM, loess) are reviewed and species functional traits and spatial structures analysed. Nine case studies of varying difficulty help to illustrate the suggested analytical methods, using the latest version of Canoco 5. All studies utilise descriptive and manipulative approaches, and are supported by data sets and project files available from the book website: <http://regent.prf.jcu.cz/maed2/>. Written primarily for community ecologists needing to analyse data resulting from field observations and experiments, this book is a valuable resource to students and researchers dealing with both simple and complex ecological problems, such as the variation of biotic communities with environmental conditions or their response to experimental manipulation. Proceedings of a Conference at the Strahlenzentrum der Justus-Liebig-Universität, Gießen, Germany, October 6-10, 1975. Organized in cooperation with Dt. Ges. f. Biophysik. Cospons. by the Comm. of the Europ. Communities, Directorate General Research, Science and Education, Biology Div. The key to any successful IT Service Management solution are strong, clear processes that are fit for purpose. The continual cycle of service

improvements must therefore look at the existing processes and assess how effective they are within changing business requirements. This innovative title not only looks at this fundamental process assessment, it does it using the key ISO/IEC standard in this area. In brief, this title explains the meeting between two standards: ITIL: the de facto standard in IT Service Management. ISO/IEC 15504 Information technology - Process assessment Readers can therefore be confident of a strong, well-thought out and solid approach which will help identify: The concepts of process assessment and process maturity How to plan and perform a process assessment How to use the approach How to launch an improvement process starting with an assessment project Because it focuses on 10 key processes the TIPA framework can be applied with equal success to ITILv2, ITIL v3 or to the ISO/IEC 20000. This manual will also convey valuable information for understanding the roles and differences between: process assessment, traditional conformity assessment, audit and self-assessment suite. Finally, it is illustrated with real-life case studies, which highlight what should be done and what should be avoided. The reader will thus learn process assessment based on genuine experiences. The presence - or absence - of soil organic matter (SOM) has important implications for agricultural productivity. It could also have significant implications for global climate due to its role as a source/sink of carbon. Therefore, it is important to understand the issues related to the accumulation or loss of SOM, to use what we have learned from experiments to make sound decisions about soil and crop management, and to test models and future concepts concerning SOM management. A database is included with the book, presenting tabular data for 34 sites in North America. Soil Organic Matter in Temperate Agroecosystems discusses all of these issues and more, answering such questions as: This book covers the essentials of needs analysis from the emerging trainer's perspective by providing just the right amount of support and knowledge without going too deep into the subject. The topics covered include when and how to do a training needs analysis; using informal and formal analysis techniques; goal, task and population analysis; and how to develop and present a training plan for management approval. Each chapter includes appropriate data gathering tools. The Skilled Trainer series provides practical guidance for those who've had some exposure to training and would like to take their career to the next level. Marketing Channel Strategy: An Omni-Channel Approach is the first book on the market to offer a completely unique, updated approach to channel marketing. Palmatier and Sivadas have adapted this classic text for the modern marketing reality by building a model that shows students how to engage customers across multiple marketing channels simultaneously and seamlessly. The omni-channel is different from the multi-channel. It recognizes not only that customers access goods and services in multiple ways, but also that they are likely doing this at the same time; comparing prices on multiple websites, and seamlessly switching between mobile and desktop devices. With the strong theoretical foundation that users have come to expect, the book also offers lots of practical exercises and applications to help students understand how to design and implement omni-channel strategies in reality. Advanced undergraduate and graduate students in marketing channels, distribution channels, B2B marketing, and retailing classes will enjoy acquiring the most cutting-edge marketing

skills from this book. A full set of PowerPoint slides accompany this new edition, to support instructors. This book discusses the concepts of volatility, uncertainty, complexity, and ambiguity (VUCA) that are the core of various paradigms used in strategic management to understand competitive advantage as well as flexibility in organizational boundaries. It serves as a valuable reference resource in the area of VUCA markets. An increase in the levels and types of uncertainty has important implications potentially for the durability of a company's advantages, the way firms learn and adapt, approaches for managing innovation and knowledge, and the attractiveness of different strategies and organizational models. In today's world, strategic flexibility in VUCA is essential for business leaders to sustain market advantage and attain a clear vision amid the chaos. Business leaders who stay focused and are aware of external volatility as the prevalent characteristic are successful, while those who are not flexible in this VUCA world and lock themselves into fixed positions lose out. The book includes empirical and conceptual research papers along with case studies and models discussing strategies for emerging markets in volatile and uncertain environments. It also covers a variety of issues, including innovation, people and processes, financial management, and leadership and strategies in VUCA markets. Apart from research fraternity and academia, the contents of the book will be useful for practitioners as well as industry watchers. This book constitutes the refereed proceedings of the 11th IFIP WG 8.9 Working Conference on Research and Practical Issues of Enterprise Information Systems, CONFENIS 2017, held in Shanghai, China, in October 2017. The 17 full papers presented in this volume were carefully reviewed and selected from 39 submissions. They were organized in topical sections named: EIS concepts, theory and methods; IoT and emerging paradigm; EIS for industry 4.0; big data analytics; and intelligent electronics and systems for industrial IoT. Subnational governments carry out more than 60% of total public procurement in OECD countries. As such, public procurement can offer a powerful tool for cities to boost local growth and advance their strategic priorities, ranging from innovation and inclusion to the transition to a low-carbon economy.
