Particular attention is given to the works of Faraday, Maxwell and Heaviside, scientists who unified the formerly separate disciplines of electricity, magnetism and light. Their electromagnetic theory—developed during the 19th century—would lead to the invention of modern radar, electrical power grids, and

telecommunication networks. Each chapter of this book begins with a short introduction followed by a reading selection. Carefully crafted study questions draw out key points in the text and focus the reader's attention on the author's methods, analysis and conclusions. Numerical and laboratory exercises at the end of each chapter test the reader's ability to understand and apply key concepts from the text. Electricity, Magnetism and Light is the third of four volumes in *A Student's Guide through the Great Physics Texts*. This book grew out of a four-semester undergraduate physics curriculum designed to encourage a critical and circumspect approach to natural science while at the same time preparing students for advanced coursework in physics. This book is particularly suitable as a college-level textbook for students of the natural sciences, history or philosophy. It can also serve as a textbook for advanced high-school or home-schooled students, or as a thematically-organized source-book for scholars and motivated lay-readers. In studying the classic scientific texts included herein, the reader will be drawn toward a lifetime of contemplation. careful experiments—performed during the 19th century—on the flow of heat through substances and across empty space. Included herein are selections from classic texts such as Carnot's Reflection on the Motive Power of Fire, Clausius' Mechanical Theory of Heat, Rutherford's Nuclear Constitution of Atoms, Planck's Atomic Theory of Matter and Heisenberg's Copenhagen Interpretation of Quantum Theory. *Hidden Gold* Jul 03 2020 The Gold family lived an idyllic life in pre-war Poland, each doing their part to run the family grocery store and tobacco concession. The oldest daughter, Shoshana, had many friends, her sister Esther was meticulous as she worked at the family store, and young David was doted on by them all. But that life is shattered in 1939 when Germany invades Poland and Jewish people are forced into the streets; their homes, schools, and businesses burned. We follow the Gold family's journey as they are forced into hiding. Just hours before the Nazis come to take over their current town, their mother has a premonition that today they will have a savior. When that someone appears, they are given hope for the first time since leaving home. But Shoshana has learned to be wary of strangers and knows that her family is in danger. The Golds hide in a cramped, secret enclosure for twenty-six months. Appalling conditions, starvation, fear of imminent betrayal and capture makes this a heart-stopping testament to the human spirit.

*Health Anxiety Among Older Adults* Aug 04 2020 The purpose of this research was to assess the effectiveness of a six-session enhanced cognitive behavioural therapy (ECBT) program for health anxiety in older adults (i.e., learning and memory aids), and to examine whether the program fostered the therapeutic alliance and motivation for psychotherapy as compared to a standard cognitive behavioural therapy (SCBT) program and wait-list control (WLC) condition. In Study 1, 57 community dwelling seniors 60 years of age and over with elevated levels of health anxiety were randomly assigned to six weeks of SCBT, ECBT, or WLC. At pretreatment, post-treatment, and three-month follow-up, participants completed questionnaires on health anxiety and its dimensions, and measures of anxiety sensitivity, state and trait anxiety, depression, pain, and health-related quality of life. Participants also completed measures of therapeutic alliance and motivation for psychotherapy. Participants were asked to complete open-ended questions at pre-treatment on the nature of health anxiety and at post-treatment on the experience of

therapy. In Study 2, a control group of 57 community participants matched with the older adult group on sex and Whiteley Index (WI) score was used as a comparison on measures of health anxiety and its dimensions. In Study 1, the results of the mixed factorial ANCOVAs indicated participants in the SCBT and ECBT groups showed significantly lower levels of health anxiety on the WI, with significant reductions in both group on subscales measuring disease fear and bodily preoccupation. There was also a significant improvement in the SCBT group on the physical component of health-related quality of life when compared to the WLC group. Using paired samples t-tests to examine pre- to post-treatment scores, participants in the SCBT group demonstrated significant improvements on all three measures of health anxiety, state and trait anxiety, depression, and both physical and mental components of health-related quality of life; participants in the ECBT group demonstrated significant improvements on two measures of health anxiety (WI, Short Health Anxiety Inventory), hypochondriacal somatic symptoms, anxiety sensitivity, and depression. Only one measure showed improvement in the WLC group. On both the ANCOVAs and paired samples t-tests, from post-treatment to follow-up, treatment gains were maintained and improvements were seen on select measures. These findings, along with findings from examination of clinically significant change, maintenance of gains at follow-up, and post-

treatment responses to open-ended questions, suggested both SCBT and EBT were effective in improving scores on measures. Qualitative analysis of open-ended responses at pre-treatment identified five themes describing the development of health anxiety in older adults including Anxiety as Genetic, Anxiety as a Learned Response, Vulnerability to Illness and Disease, Awfulness of illness, Inability to Cope, and Inadequacy of Physicians/Medical Care. In Study 2, the younger adult group was significantly higher than the older adult group on all measures with the exception of a subscale measuring disease fear/phobia. Although the results from Study 1 were mixed, overall, the findings indicated that cognitive behavioural therapy is effective for reducing aspects of health anxiety in older adults. The results contributed to the understanding of therapeutic factors and the cognitive behavioural model of health anxiety in older adults. Additional study implications, contributions, limitations, and future directions are discussed.
