**Experiencing Narrative Worlds** Feb 21 2022 What does it mean to be transported by a narrative? to create a world inside one's head? How do experiences of narrative worlds alter our experience of the real world? In this book Richard Gerrig integrates insights from cognitive psychology and from research in linguistics, philosophy, and literary criticism to provide a cohesive account of what we have most often treated as isolated aspects of narrative experience. Drawing on examples from Tolstoy to Toni Morrison, Gerrig offers new analysis of some classic problems in the study of narrative. He discusses the ways in which we are cognitively equipped to tackle fictional and nonfictional narratives; how thought and emotion interact when we experience narrative; how narrative information influences judgments in the real world; and the reasons we can feel the same excitement and suspense when we reread a book as when we read it for the first time. Gerrig also explores the ways we enhance the experience of narratives, through finding solutions to textual dilemmas, enjoying irony at the expense of characters in the narrative, and applying a wide range of interpretive techniques to discover meanings concealed by and from authors.

Characterization in Ancient Greek Literature Oct 20 2021 This is the fourth volume in the series *Studies in Ancient Greek Narrative*. The book deals with the narratological concepts of character and characterization and explores the textual devices used for purposes of characterization by ancient Greek authors from Homer to Heliodorus.

**Narratology** Mar 01 2020 This volume explores the extraordinary contribution that classical poetics has made to twentieth and twenty-first century theories of narrative, aiming not to argue that modern narratologies simply present 'old wine in new wineskins', but rather to identify the diachronic affinities shared between ancient and modern stories about storytelling. By recognizing that modern narratologists bring a particular expertise to bear upon ancient literary theory, and by interrogating ancient and modern narratologies through the mutually imbricating dynamics of their reception, it seeks to arrive at a better understanding of both. Each chapter selects a key moment in the history of narratology on which to focus, providing an overview of significant phases before offering detailed analyses of core theories and texts, from the Russian formalists and Chicago school neo-Aristotelians, through the prestructuralists, structuralists, and poststructuralists, up to the latest unnatural and antimimetic narratologists. The reception history that thus unfolds offers some remarkable plot twists and yields valuable insights into the interpretation of some notoriously difficult ancient works. Plato in the Republic is unmasked as an unreliable narrator and theorist, while Aristotle's On Poets reveals a rare glimpse of the philosopher putting narrative theory into practice in the role of storyteller. Horace's Ars Poetica and the works of ancient scholia by critics and commentators evince a rhetorically conceived poetics and sophisticated reader-response-based narratology which indicate a keen interest in audience affect and cognition - anticipating the cognitive turn in narratology's most recent postclassical phase.

**Psychology and Life** Apr 25 2022 The classic text that defined the field, Psychology and Life, Fifteenth Edition, celebrates Phil Zimbardo's 30th anniversary as its author by returning to its original themes: presenting psychology as a science and as a tool to understanding our daily lives. The book continues to provide a rigorous, research-centered survey of the discipline while

offering students features and pedagogy that will spark their interest and excite their imaginations.

**Worldmaking** Feb 09 2021 In 1978, Nelson Goodman explored the relation of “worlds” to language and literature, formulating the term, “worldmaking” to suggest that many other worlds can as plausibly exist as the “world” we know right now. We cannot catch or know “the world” as such: all we can catch are the world versions - descriptions, views or workings of the world – that are expressed in symbolic systems (words, music, dancing, visual representations). Over the twenty-five years since then, creative works have played a crucial role in realigning, reshaping and renegotiating our understandings of how worlds can be made and preserved in the face of globalizing trends. The volume is divided into three sections, each engaging with worlds as malleable constructs. Central to all of the contributions is the question: how can we understand the relationships between natural, political, cultural, fictional, literary, linguistic and virtual worlds, and why does this matter?

*Handbook of Emergent Methods* Mar 13 2021 Social researchers increasingly find themselves looking beyond conventional methods to address complex research questions. This is the first book to comprehensively examine emergent qualitative and quantitative theories and methods across the social and behavioral sciences. Providing scholars and students with a way to retool their research choices, the volume presents cutting-edge approaches to data collection, analysis, and representation. Leading researchers describe alternative uses of traditional quantitative and qualitative tools; innovative hybrid or mixed methods; and new techniques facilitated by technological advances. Consistently formatted chapters explore the strengths and limitations of each method for studying different types of research questions and offer practical, in-depth examples.

*Perrine's Literature* Nov 08 2020 This eighth edition of Perrine's *Literature: Structure, Sound, and Sense*, like the previous editions, is written for the student who is beginning a serious study of imaginative literature.

Questioning Causality: Scientific Explorations of Cause and Consequence Across Social

Contexts Aug 06 2020 In virtually every laboratory, research center, or classroom focused on the social or physical sciences today, the concept of causation is a core issue to be questioned, tested, and determined. Even debates in unrelated areas such as biology, law, and philosophy often focus on causality—“What made that happen?” In this book, experts from across disciplines adopt a reader-friendly approach to reconsider this age-old question in a modern light, defining different kinds of causation and examining how causes and consequences are framed and approached in a particular field. Each chapter uses applied examples to illustrate key points in an accessible manner. The contributors to this work supply a coherent critical analysis of the assumptions researchers and practitioners hold about causation, and explain how such thinking about causation can be improved. Collectively, the coverage is broad, providing readers with a fuller picture of research in social contexts. Beyond providing insightful description and thought-provoking questioning of causation in different research areas, the book applies analysis of data in order to point the way to smarter, more efficient practices. Consequently, both practitioners and researchers will benefit from this book.

**Psychology and Life, Discovering Psychology Edition (with MyPsychLab)** Dec 30 2019 This classic text emphasizes the science of psychology, with a special focus on applying psychology to students' daily lives. Now available in a special edition tied to the award-winning "Discovering Psychology" video series, produced by WGBH Boston with the American Psychological Association. Author Phil Zimbardo narrates the video series, as leading researchers, practitioners, and theorists probe the mysteries of the mind and body and bring psychology to life for introductory students. *Psychology and Life: The Discovering Psychology*

Edition offers the same content as the Eighteenth Edition, and adds a built in Discovering Psychology viewing guide at the end of each chapter. Each new copy of the text comes packaged at no additional cost with access to MyPsychLab, an online tool that includes links to the "Discovering Psychology" videos, as well as interactive viewing activities tied to the videos. Students can go to MyPsychLab to launch the videos and then either complete the viewing activities in their textbook or do the assignments online. There's also an Index of Multimedia that makes it easy for instructors to find and launch specific video segments for classroom presentation. Psychology and Life continues to provide a rigorous, research-centered survey of the discipline while offering students special features and learning aids that will spark their interest and excite their imaginations.

*The Classical Plot and the Invention of Western Narrative* Aug 18 2021 From Homer to Hollywood, the western storytelling tradition has canonised a distinctive set of narrative values characterised by tight economy and closure. This book traces the formation of that classical paradigm in the development of ancient storytelling from Homer to Heliodorus. To tell this story, the book sets out to rehabilitate the idea of 'plot', notoriously disconnected from any recognised system of terminology in literary theory. The first part of the book draws on developments in narratology and cognitive science to propose a way of formally describing the way stories are structured and understood. This model is then used to write a history of the emergence of the classical plot type in the four ancient genres that shaped it - Homeric epic, fifth-century tragedy, New Comedy, and the Greek novel - with insights into the fundamental narrative poetics of each.

*Textual Strategies in Ancient War Narrative* Aug 30 2022 In *Textual Strategies in Ancient War Narrative* fourteen specialists study, from literary, linguistic and historical angles the textual strategies that the Greek historian Herodotus and the Roman historian Livy employ in their accounts of two famous battles in ancient history

**Psychoanalytic Perspectives on Puberty and Adolescence** Jan 23 2022 Puberty is a time of tumultuous transition from childhood to adulthood activated by rapid physical changes, hormonal development and explosive activity of neurons. This book explores puberty through the parent-teenager relationship, as a "normal state of crisis", lasting several years and with the teenager oscillating between childlike tendencies and their desire to become an adult. The more parents succeed in recognizing and experiencing these new challenges as an integral, ineluctable emotional transformative process, the more they can allow their children to become independent. In addition, parents who can also see this crisis as a chance for their own further development will be ultimately enriched by this painful process. They can face up to their own aging as they take leave of youth with its myriad possibilities, accepting and working through a newfound rivalry with their sexually mature children, thus experiencing a process of maturity, which in turn can set an example for their children. This book is based on rich clinical observations from international settings, unique within the field, and there is an emphasis placed by the author on the role of the body in self-awareness, identity crises and gender construction. It will be of great interest to psychoanalysts, psychotherapists, parents and carers, as well as all those interacting with adolescents in self, family and society.

**Expressive Minds and Artistic Creations** Jul 05 2020 Expressive Minds and Artistic Creations: Studies in Cognitive Poetics presents multidisciplinary and interdisciplinary research papers describing new developments in the field of cognitive poetics. The articles examine the complex

connections between cognition and poetics with special attention given to how people both create and interpret novel artistic works in a variety of expressive media, including literature, music, art, and multimodal artifacts. The authors have diverse disciplinary backgrounds, but all of them embrace theories and research findings from multiple perspectives, such as linguistics, psychology, literary studies, music, art, neuroscience, and media studies. Several authors explicitly discuss empirical and theoretical challenges in doing interdisciplinary work, which is often considered as essential to future progress in cognitive poetics. Scholars address many specific research questions in their articles, including most notably, the role of embodiment and simulation in human imagination, the importance of conceptual metaphors and conceptual blending processes in the creation and interpretation of literature, and the function of multiperspectivity in poetic and multimodal texts. Several new ideas are also advanced in the volume regarding the cognitive mechanisms responsible for artistic creations and understandings. The volume overall offers an expanded view of cognitive poetics research which situates the study of expressive minds within a broader range of personal, social, cultural and historical contexts. Among other leading researchers, many contributors are world-famous scholars of psychology, linguistics, and literature, including Raymond W. Gibbs, Jr., Zoltán Kövecses, and Reuven Tsur, whose defining papers also survey the roles and significance of conceptual mechanisms in literature.

The Oxford Handbook of Cognitive Literary Studies Oct 08 2020 This title considers how the architecture that enables human cognitive processing interacts with cultural and historical contexts. Organised into five parts (Narrative, History, and Imagination; Emotions and Empathy; The New Unconscious; Empirical and Qualitative Studies of Literature; and Cognitive Theory and Literary Experience), the volume considers case studies from a wide range of historical periods and national literary traditions.

The Development of Children Jun 27 2022 Development is best understood as a fusion of biological, social, and psychological processes interacting in the unique medium of human culture. [In this text, the authors] have tried to show not only the role of each of these factors considered separately but also how they interact in diverse cultural contexts to create whole, unique human beings.-Pref.

**The Pragmatics of Politeness** Dec 10 2020 This readable book presents a new general theoretical understanding of politeness. It offers an account of a wide range of politeness phenomena in English, illustrated by hundreds of examples of actual language use taken largely from authentic British and American sources. Building on his earlier pioneering work on politeness, Geoffrey Leech takes a pragmatic approach that is based on the controversial notion that politeness is communicative altruism. Leech's 1983 book, *Principles of Pragmatics*, introduced the now widely-accepted distinction between pragmalinguistic and sociopragmatic aspects of politeness; this book returns to the pragmalinguistic side, somewhat neglected in recent work. Drawing on neo-Gricean thinking, Leech rejects the prevalent view that it is impossible to apply the terms 'polite' or 'impolite' to linguistic phenomena. Leech covers all major speech acts that are either positively or negatively associated with politeness, such as requests, apologies, compliments, offers, criticisms, good wishes, condolences, congratulations, agreement, and disagreement. Additional chapters deal with impoliteness and the related phenomena of irony ("mock politeness") and banter ("mock impoliteness"), and with the role of politeness in the learning of English as a second language. A final chapter takes a fascinating look at more than a thousand years of history of politeness in the English language.

**Sensory Linguistics** Apr 13 2021 One of the most fundamental capacities of language is the ability to express what speakers see, hear, feel, taste, and smell. Sensory Linguistics is the interdisciplinary study of how language relates to the senses. This book deals with such

foundational questions as: Which semiotic strategies do speakers use to express sensory perceptions? Which perceptions are easier to encode and which are “ineffable”? And what are appropriate methods for studying the sensory aspects of linguistics? After a broad overview of the field, a detailed quantitative corpus-based study of English sensory adjectives and their metaphorical uses is presented. This analysis calls age-old ideas into question, such as the idea that the use of perceptual metaphors is governed by a cognitively motivated “hierarchy of the senses”. Besides making theoretical contributions to cognitive linguistics, this research monograph showcases new empirical methods for studying lexical semantics using contemporary statistical methods.

**Handbook of Intercultural Communication and Cooperation** Jan 11 2021 The ability to communicate with people from diverse cultural backgrounds is becoming increasingly important. Many employers consider intercultural competence to be a key criterion for selecting qualified candidates. The authors discuss practical approaches for designing and conducting intercultural trainings, methodology, and evaluation procedures based on current research. They explore the intercultural factor within corporations particularly as it relates to human resource development, negotiating, dealing with conflict, and project management. Thoughts on developing an overall strategy for interculturality round off this handbook.

*The Psychology of Music in Multimedia* Apr 01 2020 For most of the history of film-making, music has played an integral role serving many functions - such as conveying emotion, heightening tension, and influencing interpretation and inferences about events and characters. More recently, with the enormous growth of the gaming industry and the Internet, a new role for music has emerged. However, all of these applications of music depend on complex mental processes which are being identified through research on human participants in multimedia contexts. The Psychology of Music in Multimedia is the first book dedicated to this fascinating topic. The Psychology of Music in Multimedia presents a wide range of scientific research on the psychological processes involved in the integration of sound and image when engaging with film, television, video, interactive games, and computer interfaces. Collectively, the rich chapters in this edited volume represent a comprehensive treatment of the existing research on the multimedia experience, with the aim of disseminating the current knowledge base and inspiring future scholarship. The focus on empirical research and the strong psychological framework make this book an exceptional and distinctive contribution to the field. The international collection of contributors represents eight countries and a broad range of disciplines including psychology, musicology, neuroscience, media studies, film, and communications. Each chapter includes a comprehensive review of the topic and, where appropriate, identifies models that can be empirically tested. Part One presents contrasting theoretical approaches from cognitive psychology, philosophy, semiotics, communication, musicology, and neuroscience. Part Two reviews research on the structural aspects of music and multimedia, while Part Three focuses on research examining the influence of music on perceived meaning in the multimedia experience. Part Four explores empirical findings in a variety of real-world applications of music in multimedia including entertainment and educational media for children, video and computer games, television and online advertising, and auditory displays of information. Finally, the closing chapter in Part Five identifies emerging themes and points to the value of broadening the scope of research to encompass multisensory, multidisciplinary, and cross-cultural perspectives to advance our understanding of the role of music in multimedia. This is a valuable book for those in the fields of music psychology and musicology, as well as film and media studies.

*The Oxford Handbook of Entertainment Theory* May 15 2021 The proliferation of new digital technologies has given rise to an entirely changed media landscape and revolutionized how we seek entertainment. Older entertainment media like novels, radio, and film have been joined by a host of digital media that smartphones allow us to carry almost anywhere and at all times, from video games and social media to video on demand services. This unprecedented ubiquity of entertainment media calls for new and more sophisticated theories that help us understand the fascination that different entertainment media exert on us and how they change the human experience. The Oxford Handbook of Entertainment Theory surveys and furthers the most influential psychology-driven research on media entertainment to illuminate how people are drawn into media experiences. The 41 chapters in this Handbook not only offer fresh perspectives on established theories but also introduce emerging models and highlight the importance of considering the diverse backgrounds of media users when conducting research. They also cover the motivations and reactions of media users in relationship to different types of media, the trend towards interactive media such as video games and virtual reality, and particularly popular media contents like sexuality, violence, sports, and the news. As the most comprehensive overview of psychology-based research on media entertainment available, this Handbook is an invaluable resource for seasoned researchers and those beginning to learn about the field alike.

Middlebrow Matters Jan 29 2020 This is the first book to study the middlebrow novel in France. It asks what middlebrow means, and applies the term positively to explore the 'poetics' of the types of novel that have attracted 'ordinary' fiction readers - in their majority female - since the end of the 19th century.

Narrative Impact Sep 18 2021 The impact of public narratives has been so broad (including effects on beliefs and behavior but extending beyond to emotion and personality), that the stakeholders in the process have been located across disciplines, institutions, governments, and, indeed, across epochs. Narrative Impact draws upon scholars in diverse branches of psychology and media research to explore the subjective experience of public narratives, the affordances of the narrative environment, and the roles played by narratives in both personal and collective spheres. The book brings together current theory and research presented primarily from an empirical psychological and communications perspective, as well as contributions from literary

theory, sociology, and censorship studies. To be commensurate with the broad scope of influence of public narratives, the book includes the narrative mobilization of major social movements, the formation of self-concepts in young people, banning of texts in schools, the constraining impact of narratives on jurors in the court room, and the wide use of education entertainment to affect social changes. Taken together, the interdisciplinary nature of the book and its stellar list of contributors set it apart from many edited volumes. Narrative Impact will draw readership from various fields, including sociology, literary studies, and curriculum policy. Providing new explanatory concepts, this book: \*is the first account on the psychology of narrative persuasion and brings together the relevant conceptualizations from within various sectors of psychology together with the major issues that concern cognate disciplines outside of psychology; \*focuses on understanding the mechanisms that underlie the power of public narratives to achieve broad historical and social changes; \*offers breakthroughs to the future: the role of "presence" in virtual reality narratives; the role of "zines" in females' fashioning of their selves; and the central role of imagery in transportation into narrative worlds; \*explains varying roles of emotion in narrative immersion; and \*addresses the growing blurring of fact and fiction: mechanisms and implications for beliefs and behavior.

**The Oxford Handbook of Cognitive Psychology** Dec 22 2021 This handbook is an essential, comprehensive resource for students and academics interested in topics in cognitive psychology, including perceptual issues, attention, memory, knowledge representation, language, emotional influences, judgment, problem solving, and the study of individual differences in cognition.

**The Architecture of the Imagination** Nov 01 2022 'The Architecture of the Imagination' will be an essential resource for the growing number of philosophers and psychologists studying the nature of the imagination and on its role in philosophy, aesthetics, and everyday life.

**Narratives and Narrators** Jul 17 2021 Gregory Currie offers a reflection on the nature and significance of narrative in human communication. He shows that narratives are devices for manifesting the intentions of their makers in stories, argues that human tendencies to imitation and to joint attention underlie the pleasure of narrative, and discusses authorship, character, and irony.
