In the former Soviet Union Lyudmila received her education as linguist, educator and military nurse. She majored in English/German. Later she got her Master's Degree in Social Work in New York, USA. As everyone is aware nobody leaves and departs from a good life. On the surface her main

character had a great career, house, family, children, husband But that was the tip of the iceberg. The underlying reason for her departure from the former Soviet Union was deep down and deeply hidden from the eyes of the bystanders. In her book she tried to capture the most significant events which led the country to the collapse and made an impact of the destinies of the citizens of that country greatly Being a sensitive author, she wants to say in her book, "My freedom is finishing when your freedom ends". As a matter of fact, in the former USSR the notions "will" and "freedom" were not separated. The authorities did everything what they wanted to do in spite of the fact that they hurt constantly Soviet people the people of values and dignity. The main purpose of this book is that very fact that the author intended to introduce relatively newly arrived Russian-speaking community to the American Society. To break stereotypes about Russians as the rigid people who came from the cold freezing country with similar personalities, instead she shows the real Russians in the US.

This open access book highlights the autonomous and intelligent flight control of future launch vehicles for improving flight autonomy to plan ascent and descent trajectories onboard, and autonomously handle unexpected events or failures during the flight. Since the beginning of the twenty-first century, space launch activities worldwide have grown vigorously. Meanwhile, commercial launches also account for the booming trend. Unfortunately, the risk of space launches still exists and is gradually increasing in line with the rapidly rising launch activities and commercial rockets. In the history of space launches, propulsion and control systems are the two main contributors to launch failures. With the development of information technologies, the increase of the functional density of hardware products, the application of redundant or fault-tolerant solutions,

and the improvement of the testability of avionics, the launch losses caused by control systems exhibit a downward trend, and the failures induced by propulsion systems become the focus of attention. Under these failures, the autonomous planning and guidance control may save the missions. This book focuses on the latest progress of relevant projects and academic studies of autonomous guidance, especially on some advanced methods which can be potentially real-time implemented in the future control system of launch vehicles. In Chapter 1, the prospect and technical challenges are summarized by reviewing the development of launch vehicles. Chapters 2 to 4 mainly focus on the flight in the ascent phase, in which the autonomous guidance is mainly reflected in the online planning. Chapters 5 and 6 mainly discuss the powered descent guidance technologies. Finally, since aerodynamic uncertainties exert a significant impact on the performance of the ascent / landing guidance control systems, the estimation of aerodynamic parameters, which are helpful to improve flight autonomy, is discussed in Chapter 7. The book serves as a valuable reference for researchers and engineers working on launch vehicles. It is also a timely source of information for graduate students interested in the subject.
