**Careers in Epidemiology** Dec 05 2020 EPIDEMIOLOGISTS ARE SCIENTISTS who study diseases and other health risks within specific populations, such as geographical areas, cultures, occupations, demographic groups, or those who are genetically connected. They are "disease detectives," so-called because they are the

investigators who discover how and where disease outbreaks start, then find ways to prevent them from spreading and recurring in the future. It is believed that the first epidemiologist was Hippocrates, who studied how the outbreaks of different diseases correlated with environmental factors in Ancient Greece. That was nearly 2500 years ago. Since then, epidemiologists have saved millions of lives. They prevented the return of the Black Plague, identified how AIDS was transmitted, and quickly put a stop to the recent outbreak of Ebola in the US. These are just a few historical examples. The types of diseases that epidemiologists study are vast, ranging from food poisoning, to "clusters" of children with cancer, to mad cow disease. The work of epidemiologists is based on intense research, which involves the collection of samples and data, and the application of statistical analysis. Much of it is accomplished in laboratories, but many of these professionals never set foot in a lab. Instead, they might be found in hospitals informing the medical staff of infectious outbreaks, or developing containment solutions for infections within the facility. Some work for pharmaceutical companies working on new drugs or monitoring vaccine development. Others may be out in epidemic ravaged communities, ensuring public safety as quarantine officers or investigating possible toxic agents in the environment. Still others are employed in the academic world, teaching and conducting research at universities. To do this work, epidemiologists must be good with numbers, particularly statistics, in order to collect and accurately analyze data. That skill is of primary importance, but there is plenty more to learn before entering this career. You should expect to spend about six years following high school acquiring a master's degree in public health (MPH) or a related field, such as health, biology, medicine, or statistics. When exploring an epidemiology career, you will find plenty of attractive features. For example, you will be generously compensated for your contribution to the public health of the world. The working conditions are generally excellent, the hours rarely include overtime, and travel is an option for those who want to experience other cultures. The future looks bright for future epidemiologists. The United States is placing a high priority on building up the nation's public health workforce. There are many questions that bright, energetic people are needed to help answer. What does this mean for you? It means that with a degree in public health, you will enjoy unparalleled job security and a career path filled with advancement opportunities. Best of all, you will be working in an exciting field that offers the personal and professional satisfaction of saving countless lives.

young law professionals in deciding the area of legal practice to pursue as a career. The number of legal fields and subfields is over one hundred, making it virtually impossible for an upcoming lawyer to explore all of these career avenues. Many students finish law school with little understanding of what specific law careers involve, for example, or what sports or space lawyers routinely do. This book highlights the time-consuming nature of law education and training that causes a lack of experience in legal fields as being able to successfully determine the right legal profession for the student. Finding a law career that is a significant source of satisfaction is a function of serious thinking and active research, which the current university to legal practice does not facilitate. This book is a practical guide for any student or current lawyer who is deciding and evaluating their future legal profession.

This phenomena of one organization spawning an industry has also been seen in the high-tech (Hewlett-Packard) and semiconductor industries (Fairchild). However, until now there has been no suitable explanation of why and how these organizations were able to create the next generation of industry leaders. Career Imprints shows why Baxter was so successful in spawning senior executives and offers an understanding of what it takes for an organization to produce leaders that will dominate an industry for years to come. In this important book, Higgins shows that an organization's "career imprint"<sup>3</sup>/<sub>4</sub>the result of company systems, structure, strategy, and culture<sup>3</sup>/<sub>4</sub>that employees take with them throughout their careers is the key to creating great leaders.
