*in comparing two regression models that were developed using* May 08 2021 web model 1 has an  $r^2$  value of 0.8 while model 2 has an  $r^2$  value of 0.75 however upon further analysis we find that model 1 suffers from overfitting and has a higher mse than model 2 which has a lower mse and is better at predicting new data therefore we would conclude that model 2 is the better model even though it has a slightly lower  $r^2$
