Joe Public 2030 Aug 10 2021 On the ten-year anniversary of the release of the original Joe Public Doesn't Care About Your Hospital book, author Chris Bevolo and Revive have set their sights a decade in the future with Joe Public 2030: Five Potent Predictions Reshaping How Consumers Engage Healthcare. The book explores five key ways consumer health engagement may change over the coming decade, covering everything from AI and personal monitoring to consumerism, new competition, the politicization of healthcare, and growing health disparities. The book makes five bold predictions about that future, which range from exciting and promising to ominous and discouraging. Based on insights developed by a team of researchers, strategists, and futurists at Revive, the five core predictions are supported by more than 250 resource citations and input from 22 industry experts who were interviewed for the book, including health system CEOs, venture capitalists, entrepreneurs, and physicians. The purpose of the book is to spark conversation about how the future of health and healthcare in the U.S. might emerge, and how individuals and organizations might want to prepare for – or even change - that future. This is Bevolo's seventh book, and the fourth (and final) installment in the Joe Public series. The book is scheduled for release in January 2022.

The Equity/Excellence Imperative May 19 2022 In 2021, The Association for Undergraduate Education at Research Universities (UERU)--with over 100 research university members and hosted at Colorado State University since 2013--recruited The Boyer 2030 Commission. This group was co-chaired by AAU's Barbara R. Snyder and APLU's Peter McPherson and included 14 additional distinguished higher ed leaders. The Boyer 2030 Commission sought to update the 1998 Boyer Report, the landmark publication that inspired UERU's founding in 2000 and helped spur nearly a quarter century of progress. Upon a year of research and reflection, the Boyer 2030 Commission issued *The Equity/Excellence Imperative: A Blueprint for Undergraduate Education at U.S. Research Universities*, reiterating the vital importance of undergraduate education at research universities and the need to invest in meeting what they name as the equity/excellence imperative. From the Report: "Research university presidents/chancellors, provosts, and their senior colleagues are today called upon to lead in a challenging world of deeply entrenched inequities laid bare by a deadly pandemic; a long-overdue racial reckoning; fractured democratic institutions and frayed democratic norms; an existential planetary climate emergency; a mental health crisis affecting all ages, including and especially traditional-aged undergraduate students; and growing public disaffection with and distrust of higher education. College-going and the prestige of a college degree are in decline, and, despite efforts to recruit and retain low-income undergraduate students, new data show that research universities were serving even fewer of them prior to the pandemic, let alone as a result. The Boyer 2030 Commission Report is organized around what the Commission has termed the "equity/excellence imperative," a belief that excellence and equity are inextricably entwined, such that excellence without equity (privilege reproducing privilege) is not true excellence, and equity (mere access) without excellence is unfulfilled promise. At this pivotal moment, the Boyer 2030 Commission poses these fundamental questions: How can US research universities embrace the equity/excellence imperative? Can we commit to equity as a necessary and defining precondition of excellence? Can we conceive, prioritize, and invest in equitable undergraduate achievement? Can we educate and support undergraduates for 21st-century world readiness? Meeting the equity/excellence imperative offers a leadership opportunity. Recognizing that diversity of mission, identity, organization, and culture is a long-standing strength of U.S. higher education, the Boyer 2030 Commission offers 11 provocations to catalyze the multiple actions needed for a research university to realize the equity/excellence imperative. This report will aid leaders as they work to meet this imperative, and millions of undergraduate students, their alma maters and broader human society will meaningfully and measurably benefit as a result." This book is also available as an open access ebook through the UERU. Co-Chairs: Barbara R. Snyder, President, AAU and Peter McPherson, President Emeritus, APLU Commission Members: Michael Crow, President, Arizona State University; Andrew Delbanco, President, Teagle Foundation; Roger Ferguson, former President, TIAA-CREF; Kathleen Fitzpatrick, Director of Digital Humanities, Michigan State University; Kevin Kruger, President and CEO, NASPA-Student Affairs Administrators in Higher Education; Gary May, Chancellor, University of California, Davis; Sarah Newman, Director of Art and Education at metaLAB, Harvard University; Lynn Pasquerella, President, American Association of Colleges & Universities; Deborah Santiago, Co-Founder and CEO, Excelencia in Education; Claude Steele, Lucie Stern Professor in the Social Sciences, Emeritus, Stanford University; Holden Thorp, Editor-in-Chief, Science; Eric Waldo, Founding Executive Director of Michelle Obama's Reach Higher; Mary Wright, Associate Provost for Teaching and Learning, Brown University; Ex officio: Elizabeth Loizeaux, Boston University; Former President, UERU Staff: Liz Bennett, Associate Director, UERU; Steven Dandaneau, Executive Director, UERU; Howard Gobstein, Senior Vice President, APLU; Ken Goldstein, Senior Vice President, AAU; Tara King, Education Program and Evaluation Manager, AAU; Emily Miller, Deputy Vice President, AAU; Mariah Pursley, Senior Coordinator, UERU; Kacy Redd, Associate Vice President, APLU; Liz Wasden, Research Assistant, University of Maryland, College Park

The Politics of the Final Hundred Years of Humanity (2030-2130) Dec 14 2021 This book is the first book that looks at both the politics of maintaining the trajectory toward humanity's final hundred years and the politics of those final hundred years. It is the first book to take up theoretical and practical aspects with respect to both the movement toward and events during these final hundred years. As a result, it is the first book that attempts to provide a more complete picture of the politics of catastrophic human-caused environment change. The fact that the book provides a way into the variety of policy problems that catastrophic human-caused environment change is creating means that it is also important to those in Public Policy. The book also raises a series of philosophical and ethical questions associated with human rights, which are significant to those who study Political Philosophy (and some of those who study Law), international action to mitigate the effects of climate change, the nature of science and the limitations of political institutions.

America 2030 Sep 30 2020 The year is 2030 and the America you know is gone. In its place are streets lined with panhandlers, inescapable crime, empty schools, overflowing hospices, abandoned churches, and stranglehold restrictions on what you can buy, say, and believe. New York Times bestselling author Ben Shapiro's *America 2030* is not fiction; it is a serious projection of things to come if our country continues down its current path. In between narrative snapshots of our dystopian future, Shapiro looks at the policies and people who put America's frightening transformation in motion.

Universities and Sustainable Communities: Meeting the Goals of the Agenda 2030 Jan 23 2020 The book showcases examples of university engagement in community initiatives and reports on the results from research and from a variety of institutional projects and programmes. As a whole, the book illustrates how actors at the community (microlevel) and other levels (meso and macro) can make valuable and concrete contributions to the implementation of the Sustainable Development Goals (SDGs) and, more specifically, to achieving the objectives defined at the 2030 Agenda for Sustainable Development. It is one of the outcomes of the "Second World Symposium on Sustainability Science", which was jointly organised by the Pontifícia Universidade Católica do Paraná (Brazil), the Research and Transfer Centre "Sustainable Development and Climate Change Management" and the "European School of Sustainability Science and Research" at Hamburg University of Applied Sciences (Germany), in cooperation with the Inter-University Sustainable Development Research Programme (IUSDRP).

Education for Sustainable Development Jun 20 2022

Facing 2030 Sep 23 2022 Currently, the human race is living in troubled times, exemplified by the issue of Climate Change. The following pages attempt a reflection on this to explore how do we make sense of its strange effects? To do this we need to take it seriously and resist the temptation to consign it to the Too Hard Basket.

2030 - The Year Civilisation Will Die Nov 25 2022 This book is not about global warming and whether it is taking place or not, how fast it is and what effects it will have. Nor is it about population growth. Nor is it about running out of effective vaccines and antibiotics. Those issues, in isolation, are covered in great depth by many other sources. This book brings the three together, considering the possibility of the triad becoming critical at the same time. Experts disagree on exact dates, but the most likely period this will happen to us is some time between 2030 and 2040 if we are lucky, a little earlier if not! If and when this three-fold tipping point occurs, there will only be a short period before a major collapse in global population, a humanitarian disaster on a scale of unprecedented magnitude. This book is not designed to scare or frighten the reader, but to help them consider the true risk of this upcoming catastrophe. Once understood, it then details a powerful solution available to us with current technology: the global Bio-Active Carbon Sink.

2020/2030: The Decade of The Unfolding: where are We Going? Aug 30 2020 Never in modern times, that is, after The Renaissance, has history witnessed the extreme revisionism that we are seeing today, as we speak. Everything that we have held dear to us is now being challenged: religion, family, nation and Western Christian-Hellenic values. This revisionism is bent on destroying all of it under the pretense of "progressivism". We are progressive if we disregard all these traditional values. Nevertheless, there is something very wrong with this word, because the dictionary defines "progress" as improvement. How can we improve such concepts as religion, family, nation, personal choice and freedom? Which are the substitutes if any? Here we are now witnessing the subtle or not so subtle eradication of all the tenets and values, which have conformed our history, our society, our individual freedoms and personality. The "new world order" is knocking at our doors; we are still unaware of its consequences. I suggest that we read, or reread Orwell's novel, 1984, because we now should expect its realization by, let us say, 2030, if not sooner. That this, after the UN Agenda 2030, the ID 2020 comes to full fruition, helped now by the "Coronavirus" Pandemic, already predicted by those who will become immensely rich and powerful: the elite. Find out who they are! The author has taught at several prestigious universities in the United States and abroad. His books and articles fall in the realm of academic thought, medieval, renaissance, and romance comparative literatures. He is actually retired and travelling (before the Chinese virus) between Europe and The United States.

Why Are We Waiting? Dec 22 2019 An urgent case for climate change action that forcefully sets out, in economic, ethical, and political terms, the dangers of delay and the benefits of action. The risks of climate change are potentially immense. The benefits of taking action are also clear: we can see that economic development, reduced emissions, and creative adaptation go hand in hand. A committed and strong low-carbon transition could trigger a new wave of economic and technological transformation and investment, a new era of global and sustainable prosperity. Why, then, are we waiting? In this book, Nicholas Stern explains why, notwithstanding the great attractions of a new path, it has been so difficult to tackle climate change effectively. He makes a compelling case for climate action now and sets out the forms that action should take. Stern argues that the risks and costs of climate change are worse than estimated in the landmark Stern Review in 2006—and far worse than implied by standard economic models. He reminds us that we have a choice. We can rely on past technologies, methods, and institutions—or we can embrace change, innovation, and international collaboration. The first might bring us some short-term growth but would lead eventually to chaos, conflict, and destruction. The second could bring about better lives for all and growth that is sustainable over the long term, and help win the battle against worldwide poverty. The science warns of the dangers of neglect; the economics and technology show what we can do and the great benefits that will follow; an examination of the ethics points strongly to a moral imperative for action. Why are we waiting?

Replacing GDP by 2030 Feb 04 2021 Proposes a new strategy for the beyond-GDP community which aims to replace the economic paradigm centred on Gross Domestic Product (GDP) by 2030.

Moving to a Finite Earth Economy - Crew Manual Apr 25 2020 "Moving to a Finite Earth Economy - Crew Manual" is a book that, in an all-inclusive way, outlines what humanity needs to do to successfully address the root cause of our climate emergency. When it comes to climate change, the past doesn't equal the future. What is happening now has never occurred during humanity's time on Earth. Who better than a futurist to address this? Futurist David Houle immersed himself in all facets of global warming and climate change over the past four years. He spent two years researching, writing and co-authoring "This Spaceship Earth". What he learned in that process prompted Houle to cofound a global nonprofit: thisspaceshipearth.org. As a result, Houle was invited to speak at the EPA, at the NASA Goddard Space Flight Center, and at numerous other environmental gatherings and conferences around the globe. Houle wrote, "It is my fundamental responsibility as a futurist to be right about the future, and to offer possible suggestions on how best to navigate it. This book does just that for the existential threat that is climate change." This is NOT another long, dense, difficult to read book arguing about whether climate change is real. It accepts that it is, that it is caused by us, and sets forth what we must do. The need for URGENCY is reinforced throughout the book. Houle has no qualms about stating the facts as he sees them. We have until 2030 and we haven't a minute to waste. Houle and his co-author, Bob Leonard, make the case for humanity to move to a Finite Earth Economy as fully as possible by 2030. They discuss the new metrics and technologies needed to advance from here to there. Houle and Leonard provide clarity as to what must be done at all levels of humanity from global corporations and nation state governments all the way to individuals. This book also deals with two major issues rarely covered in climate change literature: population management and strategic retreat. This book answers the question: "What can we do to successfully prevail over climate change?" The time for dealing with denial is over. Now is the time to focus on solutions... solutions that impact every facet of modern life. For those of you who are ready to do something about climate change, this book will help you walk your talk. "Moving to a Finite Earth Economy" is a clear-eyed look at what's coming, and what we can do about it.

The Future of Nursing 2020-2030 Mar 17 2022 The decade ahead will test the nation's nearly 4 million nurses in new and complex ways. Nurses live and work at the intersection of health, education, and communities. Nurses work in a wide array of settings and practice at a range of professional levels. They are often the first and most frequent line of contact with people of all backgrounds and experiences seeking care and they represent the largest of the health care professions. A nation cannot fully thrive until everyone - no matter who they are, where they live, or how much money they make - can live their healthiest possible life, and helping people live their healthiest life is and has always been the essential role of nurses. Nurses have a critical role to play in achieving the goal of health equity, but they need robust education, supportive work environments, and autonomy. Accordingly, at the request of the Robert Wood Johnson Foundation, on behalf of the National Academy of Medicine, an ad hoc committee under the auspices of the National Academies of Sciences, Engineering, and Medicine conducted a study aimed at envisioning and charting a path forward for the nursing profession to help reduce inequities in people's ability to achieve their full health potential. The ultimate goal is the achievement of health equity in the United States built on strengthened nursing capacity and expertise. By leveraging these attributes, nursing will help to create and contribute comprehensively to equitable public health and health care systems that are designed to work for everyone. The Future of Nursing 2020-2030: Charting a Path to Achieve Health Equity explores how nurses can work to reduce health disparities and promote equity, while keeping costs at bay, utilizing technology, and maintaining patient and family-focused care into 2030. This work builds on the foundation set out by The Future of Nursing: Leading Change, Advancing Health (2011) report.

Waste to Wealth Jul 21 2022 Waste to Wealth proves that 'green' and 'growth' need not be binary alternatives. The book examines five new business models that provide circular growth from deploying sustainable resources to the sharing economy before setting out what business leaders need to do to implement the models successfully.

Teaching 2030 Apr 30 2023 In the raging controversy over the purpose of public education and how to fix the nation's underperforming schools, the voices of America's best teachers are seldom heard. Now for the first time, in a provocative book about the future of teaching and learning, 12 of America's most accomplished classroom educators join a leading advocate for a 21st-century teaching profession to bring expert pedagogical know-how and fresh and provocative policy ideas to the national school reform debate. Together they identify four emergent realities that will shape the learning experience of children born in the New Millennium, and propose six levers of change that can ignite a bright future for students by ensuring they all have access to excellent teaching.

Higher Education Landscape 2030 Apr 06 2021 This open access Springer Brief provides a systematic analysis of current trends and requirements in the areas of knowledge and competence in the context of the project "(A) Higher Education Digital (AHEAD)—International Horizon Scanning / Trend Analysis on Digital Higher Education." It examines the latest developments in learning theory, didactics, and digital-education technology in connection with an increasingly digitized higher education landscape. In turn, this analysis forms the basis for envisioning higher education in 2030. Here, four learning pathways are developed to provide a glimpse of higher education in 2030: Tamagotchi, a closed ecosystem that is built around individual students who enter the university soon after secondary education; Jenga, in which universities offer a solid foundation of knowledge to build on in later phases; Lego, where the course of study is not a monolithic unit, but consists of individually combined modules of different sizes; and Transformer, where students have already acquired their own professional identities and life experiences, which they integrate into their studies. In addition, innovative practice cases are presented to illustrate each learning path.

2030 Second Coming Feb 22 2020 Hidden in the stories of the life of Christ are prophetic clues to the year of His return. A Divine time scale recorded in Second Peter is the key that unlocks this ancient mystery. Although no man can

know the day or hour, in 2030 Jesus Christ will return to rapture the Church, restore Israel and begin the thousand year Messianic age. Also revealed in the prophetic Scripture is the year that the Tribulation will begin (2023) as well as 7 years of plenty (2016) for believers to prepare for: "The test that is about to come upon the whole world." Covered as well in "2030 Second Coming" is the Seventh Trumpet post-Tribulation Rapture, deconstructing Darby's pre-Tribulation rapture, the invisible return heresy, the meaning of the Seven Seals Scroll, the Seven Churches of the last days, the restrainer is the mystery of iniquity, and the three pentagram mark of the beast.

Tutorial for Outline of the Healthy China 2030 Plan Nov 13 2021 "Healthy China 2030" is a national strategy for improving the health of the population and coordinating health and socio-economic development, and a major means for the country to participate in global health governance and meet targets set in the 2030 Agenda for Sustainable Development. This outline of the plan will be a blueprint and an action plan for facilitating the development of Healthy China. This tutorial book is a guide for "Outline of the Healthy China 2030 Plan" released on October 25, 2016. This book is organized by 29 chapters. It uses data, background description and figures to facilitate readers to know the plan. The book Editor-in-Chief Bin Li is the Former Minister of National Health Commission of PRC, and is the Vice Chairman of the National Committee of the Chinese People's Political Consultative Conference. The book Associate Editor-in-Chief Xiaowei Ma is the Minister of National Health Commission of PRC.

2030 Jul 29 2020 The year is 2030. The world is in chaos, and Onyx Pion, a young woman from NYC with superior military training, steals compromising information from Orion, her powerful and dangerous employer. Marked for death, Onyx desperately tries to reach Mateo, her mentor, the only person she can trust, before she runs out of time. But unfortunately, Orion Security is part of a global empire that rules the world. With their drones patrolling the skies and surveillance everywhere, it's only a matter of time before Kyle, Orion's murderous clean-up man, catches up with Onyx, and she realizes nothing is what it seems.

Hello from 2030 Feb 28 2023 "Would you like to know the future? And, will it be what we think it will be, or will today's predictions be laughably wrong? In Hello from 2030, middle graders get a peek at what's coming just around the corner. In the year 2030, today's kids will be grappling with issues adults are just starting to address now. No, not flying cars: real world conundrums like, what will 8 billion people eat? How can humans produce less trash? Which cool technologies will be used to figure all this out? And, how do people predict the future anyway? This book gives kids not only plenty to dream, argue, and think about, but also a first-hand look at futurology, the science of predicting the future."--

Fashion Industry 2030 Mar 25 2020 The book explains in detail and with many examples the concept of responsible innovation by answering the following questions: How will the fashion industry be in 2030? What can the different stakeholders do in order to speed the responsible innovation? Which will be the role of traceability, circularity, cradle-to-cradle, collaborative consumption, B-corporations? How technologies can catalyze the change? How the consumers interested in sustainability can contribute to this change?

2030 May 27 2020 In "2030, Bob Hunter has drawn on the experience of a lifetime to argue that our time is running out on planet Earth. He, and many respected scientists, believe that all environmental lines will be crossed around the year 2030. By that time, climate change will be so extreme as to be irreversible. The burning off of the planet's ozone layer and the melting of the polar ice cap - with its attendant disruption of ocean currents and flooding of low-lying areas around the world - will be impossible to stop. In this book, he produces the scientific evidence for global warming - and the role we all play in it. Then he goes on to spell out the stunning consequences in his usual vigorous, no-holds-barred way. What makes this book hopeful, however, is Hunter's activist-at-the-barricades conviction that, if we all act now, we can still change this. To do so, he argues, we have to make environmental protection the chief concern of every government - local, national, international - turning all our armies and security forces into what Hunter calls "protectors of the lifeboat." This won't be easy, for powerful lobby groups, fighting for the oil and gas industries, have immense influence and the ears of our decision-makers. But, Hunter argues, if we do nothing, future generations will have reason to curse us - if there are future generations. At the same time, each of us can make a personal commitment to, as Hunter says, "step back from the edge." He freely admits his own lifetime as an "energy mammoth," but Bob Hunter has pledged - as he argues all of us should - to change his own climate-damaging habits and shows us how this can be done. "From the Hardcover edition.

The Future of Education and Labor Jun 27 2020 This book explores the ways in which education impacts labor markets. Specifically, the contributions in this book indicate that the future of labor is creative, socially aware and inter-disciplinary while identifying the changes and innovations needed in our educational systems to meet this demand. Due to an increasing automatization (robotic manufacturing), the character of labor and work in general will change dramatically in the near future. This will be the case not only in the western countries, but also in the larger emerging economies in Asia, for example China and India. While societal environments, economy and the character of labor are increasingly in a process of dramatic changes, the educational systems and the leading principles of research about labor and employment are not changing adequately. Cross-disciplinary (inter-disciplinary and trans-disciplinary) thinking and learning is not the main focus of our educational systems. Consequently, the systems of academic research follow and apply disciplinary or even sub-disciplinary strategies, avoiding cross-disciplinary research approaches, and not supporting inter-disciplinary academic career models. This book introduces such strategic models to better prepare the next generation of workers for the new knowledge economy, and the future of democratic societies.

Imagine Boston 2030 Jan 03 2021 Today, Boston is in a uniquely powerful position to make our city more affordable, equitable, connected, and resilient. We will seize this moment to guide our growth to support our dynamic economy, connect more residents to opportunity, create vibrant neighborhoods, and continue our legacy as a thriving waterfront city. Mayor Martin J. Walsh's Imagine Boston 2030 is the first citywide plan in more than 50 years. This vision was shaped by more than 15,000 Boston voices.

2030 - The Future of Medicine Apr 18 2022 Over the last couple of years, the credit crunch has driven a near-collapse of the world's financial systems. With the benefit of hindsight, many say this could have been predicted and avoided. Over the next 10-20 years, healthcare is headed for its own meltdown: an inability to fund the growth in demand and the appearance of costly new medical technology within the current healthcare systems framework. This 'meltdown' will not be as sudden as that in the world of finance: it will occur over the next 20 years, but the failure of the current sources of healthcare funding to meet our expectations of care quantity and quality will have consequences every bit as serious as the banking crisis. The warning signs are there, the crisis is already being predicted - but is it inevitable, or can it be avoided? This book offers a penetrating analysis of the underlying problems, and offers some simple, but far-reaching solutions to bring supply and demand back into balance and avoid the meltdown. It is not a contribution to the current political debate but a primer for the changes to the underlying fabric of healthcare if reforms such as Obamacare have any chance of sustainable success. In the course of the book, we confront many topical challenges: How can people be persuaded to manage their own health better?; Can we afford to spend more of today's money on disease prevention and detection, to save future costs?; Will 'personalised medicine' be cheaper, or more expensive?; Are healthcare IT systems a key part of the solution or doomed to be expensive white elephants?; and most importantly: What will the future of healthcare look like, for us and for our children and grandchildren? To bring the answers to this final question alive, the book uses a fictitious family, the Carters, to illustrate the changes we will see, the dilemmas we will face and the solutions we must strive for. Interspersed between the text are the vignettes of members of the family, their diseases and treatments and how change has affected each of their lives.

Global Trends 2030: Alternative Worlds Sep 11 2021 This important report, Global Trends 2030-Alternative Worlds, released in 2012 by the U.S. National Intelligence Council, describes megatrends and potential game changers for the next decades. Among the megatrends, it analyzes: - increased individual empowerment - the diffusion of power among states and the ascent of a networked multi-polar world - a world's population growing to 8.3 billion people, of which sixty percent will live in urbanized areas, and surging cross-border migration - expanding demand for food, water, and energy It furthermore describes potential game changers, including: - a global economy that could thrive or collapse - increased global insecurity due to regional instability in the Middle East and South Asia - new technologies that could solve the problems caused by the megatrends - the possibility, but by no means the certainty, that the U.S. with new partners will reinvent the international system Students of trends, forward-looking entrepreneurs, academics, journalists and anyone eager for a glimpse into the next decades will find this essential reading.

2030 Kids Feb 16 2022

School Environment and Sustainable Development Goals Beyond 2030 Oct 12 2021 This book on School Environment and the SDGs Beyond 2030 is a continuation of our maiden, second and third publications on School Environment in Nigeria and the Philippines, published in February, 2015; School Environment in Nigeria, Ghana and the Philippines published in March, 2017; and School Environment in Africa and Asia Pacific published in July, 2018. The philosophy being that since there is a shift from globalization to internationalization and to cross-border education, there is the urgent need to revisit some topical issues in our school environment towards the realization of an internationalized, qualitative and cross-border teaching and learning, using the Sustainable Development Goals as a yardstick.

A New Era in Global Health Jul 09 2021 Explores the great potential for nursing involvement in promoting global health. This unique text elucidates the relationship between global nursing and global health, underscoring the significance of nurses' contributions in furthering the Post-2015 Agenda of the United Nations regarding global health infrastructures, and examining myriad opportunities for nurses to promote the 17 Sustainable Development Goals (SDGs) and foster health and healthy environments worldwide. While past nursing literature has emphasized nursing's potential involvement and influence in the global arena, this is the first book to identify, validate, and promote nurses' proactive and multidimensional work in furthering current transnational goals for advancing health on a global scale. The book includes an introduction to global health, clarification of terms and roles, perspectives on education, research, and theory related to global nursing, a history of the partnership between the United Nations and the nursing profession, an in-depth exploration of the 17 SDGs and relevant nursing tasks, as well as several chapters on creating a vision for 2030 and beyond. It is based on recent and emerging developments in the transnational nursing community, and establishes, through the writings of esteemed global health and nursing scholars, a holistic dialogue about opportunities for nurses to expand their roles as change agents and leaders in the cross-cultural and global context. The personal reflections of contributors animate such topics as global health ethics, the role of caring in a sustainable world, creating a shared humanity, cultural humility, and many others. Key Features: Examines, for the first time, nursing's role in each of the 17 SDGs Integrates international initiatives delineating nursing's role in the future of global health Creates opportunities for nurses to redefine their contributions to global health Includes personal reflections to broaden perspectives and invite transnational approaches to professional development Distills short, practical, and evidence-based chapters describing global opportunities for nurses in practice, education, and research

Life in 2030 Aug 22 2022 Life in 2030 is a ground-breaking, practical, and, above all, positive vision of life in twenty-first-century Canada. As we move into the next century, the development of sustainable and environmentally benign patterns of resource utilization and socioeconomic development is an essential priority. In this book, John Robinson and his co-authors investigate the possibility and impacts of a sustainable future for Canada.

The Exponential Age Jan 15 2022 A bold exploration and call-to-arms over the widening gap between AI, automation, and big data—and our ability to deal with its effects We are living in the first exponential age. High-tech innovations are created at dazzling speeds; technological forces we barely understand remake our homes and workplaces; centuries-old tenets of politics and economics are upturned by new technologies. It all points to a world that is getting faster at a dizzying pace. Azeem Azhar, renowned technology analyst and host of the Exponential View podcast, offers a revelatory new model for understanding how technology is evolving so fast, and why it fundamentally alters the world. He roots his analysis in the idea of an "exponential gap" in which technological developments rapidly outpace our society's ability to catch up. Azhar shows that this divide explains many problems of our time—from political polarization to ballooning inequality to unchecked corporate power. With stunning clarity of vision, he delves into how the exponential gap is a near-inevitable consequence of the rise of AI, automation, and other exponential technologies, like renewable energy, 3D printing, and synthetic biology, which loom over the horizon. And he offers a set of policy solutions that can prevent the growing exponential gap from fragmenting, weakening, or even destroying our societies. The result is a wholly new way to think about technology, one that will transform our understanding of the economy, politics, and the future.

Dear Marin Nov 01 2020 Former Marin County community organizer and promoter of "systems thinking" shares her first-person voice following on insights gathered over five years of local experience. This book is full of specific datapoints, examples, and suggestions for making the world a better place, beginning with Marin County residents learning more about the very real challenges within their own community. The focus is on Marin County, California, but Marin is contextualized within and compared to California, the United States, and in some cases, the globe. Each issue area - organized by the first six United Nations Sustainable Development Goals of 2030 - is looked at from existing reports, but also, a systems worldview. This means that each issue area is considered in the context of related issues, a long-term perspective, and the role of relationships - of all kinds - and how these factors impact our collective ability to alleviate the challenges related to each. The author makes a concerted effort to include information about Native North American groups as they are often left out of collective reports for various reasons.

2030 Mar 05 2021 Santiago's most cherished desire is to ignite an end-time worldwide revival because the end of the journey for humankind is at hand in nine short years in the year 2030, when the Lord Jesus will return for His beloved bride, the Christian Church. If anyone has not been redeemed or repurchased from Satan, the devil, by the precious blood of Jesus Christ shed at the cross at His crucifixion, he will die in his sin and will not attain eternal life but will spend eternity in the furnace of fire as pronounced by Jesus, our Lord and Savior Himself (Matt. 13:42 and Matt. 13:50). Matthew 22:1-14 talks about a certain King who arranged a wedding for His Son, and He sent His servant Santiago to call those who are invited to the wedding, but many of them were not willing to come. Then the King said to His servant, Santiago, the wedding is now ready, but those who were invited were not worthy; therefore, go into the highway and, as many as you find, invite them to the wedding. So Santiago went and wrote this love letter and invitation to all whom he found both good and bad. Every human being occupying space in all four corners of the earth qualifies to attend the wedding of the King's Son because we are all either good or bad. All it takes is accepting the Lord Jesus Christ as one's Lord and Savior, and the miracle of being born again takes place. And the new creation gets clothed in Jesus, and this is the only invitation believers are required to attend the wedding and live forever in the presence of the Lord. May every believer in Christ enjoy his trip home as we all are raptured to meet the Lord in the air in the quickly approaching year 2030 to attend the wedding feast of the bride and the groom in the presence of the Father. Amen.

Higher Education Landscape 2030 Oct 24 2022 This open access Springer Brief provides a systematic analysis of current trends and requirements in the areas of knowledge and competence in the context of the project "(A) Higher Education Digital (AHEAD)—International Horizon Scanning / Trend Analysis on Digital Higher Education." It examines the latest developments in learning theory, didactics, and digital-education technology in connection with an increasingly digitized higher education landscape. In turn, this analysis forms the basis for envisioning higher education in 2030. Here, four learning pathways are developed to provide a glimpse of higher education in 2030:

Tamagotchi, a closed ecosystem that is built around individual students who enter the university soon after secondary education; Jenga, in which universities offer a solid foundation of knowledge to build on in later phases; Lego, where the course of study is not a monolithic unit, but consists of individually combined modules of different sizes; and Transformer, where students have already acquired their own professional identities and life experiences, which they integrate into their studies. In addition, innovative practice cases are presented to illustrate each learning path.

2030 Jan 27 2023 Winner of the 2012 Grand Canyon Reader Award for a Non-fiction book Global events and new technology change how we live from moment to moment. So, what will our world be like in twenty years? Come take a look as futurists Amy Zuckerman and James Daly examine what a kid's daily life might be like in the year 2030. Inspired and informed by trends and scientific and technological research, 2030 is not only a peek at some cool future gadgets (talking dog collars, cars that drive themselves), but also a thoughtful examination of how our lives might be impacted as we adjust to environmental change.

Clean Disruption of Energy and Transportation Dec 26 2022 The industrial age of energy and transportation will be over by 2030. Maybe before. Exponentially improving technologies such as solar, electric vehicles, and autonomous (self-driving) cars will disrupt and sweep away the energy and transportation industries as we know it. The same Silicon Valley ecosystem that created bit-based technologies that have disrupted atom-based industries is now creating bit- and electron-based technologies that will disrupt atom-based energy industries. Clean Disruption projections (based on technology cost curves, business model innovation as well as product innovation) show that by 2030: - All new energy will be provided by solar or wind. - All new mass-market vehicles will be electric. - All of these vehicles will be autonomous (self-driving) or semi-autonomous. - The new car market will shrink by 80%. - Even assuming that EVs don't kill the gasoline car by 2030, the self-driving car will shrink the new car market by 80%. - Gasoline will be obsolete. Nuclear is already obsolete. - Up to 80% of highways will be redundant. - Up to 80% of parking spaces will be redundant. - The concept of individual car ownership will be obsolete. - The Car Insurance industry will be disrupted. The Stone Age did not end because we ran out of rocks. It ended because a disruptive technology ushered in the Bronze Age. The era of centralized, command-and-control, extraction-resource-based energy sources (oil, gas, coal and nuclear) will not end because we run out of petroleum, natural gas, coal, or uranium. It will end because these energy sources, the business models they employ, and the products that sustain them will be disrupted by superior technologies, product architectures, and business models. This is a technology-based disruption reminiscent of how the cell phone, Internet, and personal computer swept away industries such as landline telephony, publishing, and mainframe computers. Just like those technology disruptions flipped the architecture of information and brought abundant, cheap and participatory information, the clean disruption will flip the architecture of energy and bring abundant, cheap and participatory energy. Just like those previous technology disruptions, the Clean Disruption is inevitable and it will be swift.

Leadership 2030 Dec 02 2020 The tumultuous changes in the business world during the last decade have forced too many to focus on the short term, rushing to figure out how to produce quarterly profits in chaotic conditions. As a result, the longer view is often obscured, leaving businesses so busy fighting today's battles that they are completely unprepared for tomorrow's war. The next cataclysmic wave is surging relentlessly ahead, demanding leaders who can steer their companies through complexity and change. In Leadership 2030, six megatrends are uncovered for the forward-thinking leader that will dramatically impact organizations' markets, cultures, systems, and processes: 1. Globalization 2.0: Asia dominates the global economy. 2. Climate change: Sustainability becomes imperative. 3. Individualism: Freedom of choice erodes loyalty. 4. Digitization: Boundaries blur between private and working lives. 5. Demographic changes: Aging populations intensify the talent war. 6. Converging technologies: The sharpest tech shift in history is around the corner. Research findings and case studies, drawn from original research conducted jointly

with foresight company Z-Punkt and further analyzed by Hay Group, provide compelling evidence of each megatrend and highlight the skills, capabilities, and attitudes leaders must cultivate in order to maneuver through it all. Tomorrow's changes are coming. With Leadership 2030, you can prepare for them today!

2030: How Today's Biggest Trends Will Collide and Reshape the Future of Everything Mar 29 2023 AN INTERNATIONAL BESTSELLER Wall Street Journal Bestseller A Porchlight Book Bestseller Financial Times Best Books of 2020 Yahoo Finance Favorite Business Books of 2020 JP Morgan NextList 2021 selection "Bold, provocative...illuminates why we're having fewer babies, the middle class is stagnating, unemployment is shifting, and new powers are rising." —ADAM GRANT The world is changing drastically before our eyes—will you be prepared for what comes next? A groundbreaking analysis from one of the world's foremost experts on global trends, including analysis on how COVID-19 will amplify and accelerate each of these changes. Once upon a time, the world was neatly divided into prosperous and backward economies. Babies were plentiful, workers outnumbered retirees, and people aspiring towards the middle class yearned to own homes and cars. Companies didn't need to see any further than Europe and the United States to do well. Printed money was legal tender for all debts, public and private. We grew up learning how to "play the game," and we expected the rules to remain the same as we took our first job, started a family, saw our children grow up, and went into retirement with our finances secure. That world—and those rules—are over. By 2030, a new reality will take hold, and before you know it: - There will be more grandparents than grandchildren - The middle-class in Asia and Sub-Saharan Africa will outnumber the US and Europe combined - The global economy will be driven by the non-Western consumer for the first time in modern history - There will be more global wealth owned by women than men - There will be more robots than workers - There will be more computers than human brains - There will be more currencies than countries All these trends, currently underway, will converge in the year 2030 and change everything you know about culture, the economy, and the world. According to Mauro F. Guillen, the only way to truly understand the global transformations underway—and their impacts—is to think laterally. That is, using "peripheral vision," or approaching problems creatively and from unorthodox points of view. Rather than focusing on a single trend—climate-change or the rise of illiberal regimes, for example—Guillen encourages us to consider the dynamic inter-play between a range of forces that will converge on a single tipping point—2030—that will be, for better or worse, the point of no return. 2030 is both a remarkable guide to the coming changes and an exercise in the power of "lateral thinking," thereby revolutionizing the way you think about cataclysmic change and its consequences.

Leave No One Behind Jun 08 2021 The ambitious 15-year agenda known as the Sustainable Development Goals, adopted in 2015 by all members of the United Nations, contains a pledge that "no one will be left behind." This book aims to translate that bold global commitment into an action-oriented mindset, focused on supporting specific people in specific places who are facing specific problems. In this volume, experts from Japan, the United States, Canada, and other countries address a range of challenges faced by people across the globe, including women and girls, smallholder farmers, migrants, and those living in extreme poverty. These are many of the people whose lives are at the heart of the aspirations embedded in the 17 Sustainable Development Goals. They are the people most in need of such essentials as health care, quality education, decent work, affordable energy, and a clean environment. This book is the result of a collaboration between the Japan International Cooperation Research Institute and the Global Economy and Development program at Brookings. It offers practical ideas for transforming "leave no one behind" from a slogan into effective actions which, if implemented, will make it possible to reach the Sustainable Development Goals by 2030. In addition to policymakers in the field of sustainable development, this book will be of interest to academics, activists, and leaders of international organizations and civil society groups who work every day to promote inclusive economic and social progress.

Energy Access Scenarios to 2030 for the Power Sector in Sub-Saharan Africa May 07 2021 In order to reach a goal of universal access to modern energy services in Africa by 2030, consideration of various electricity sector pathways is required to help inform policy-makers and investors, and help guide power system design. To that end, and building on existing tools and analysis, we present several 'high-level', transparent, and economy-wide scenarios for the sub-Saharan African power sector to 2030. We construct these simple scenarios against the backdrop of historical trends and various interpretations of universal access. They are designed to provide the international community with an indication of the overall scale of the effort required. We find that most existing projections, using typical long-term forecasting methods for power planning, show roughly a threefold increase in installed generation capacity occurring by 2030, but more than a tenfold increase would likely be required to provide for full access - even at relatively modest levels of electricity consumption. This equates to approximately a 13% average annual growth rate, compared to a historical one (in the last two decades) of 1.7%.
